COMPORTAMIENTO DE LA LUZ

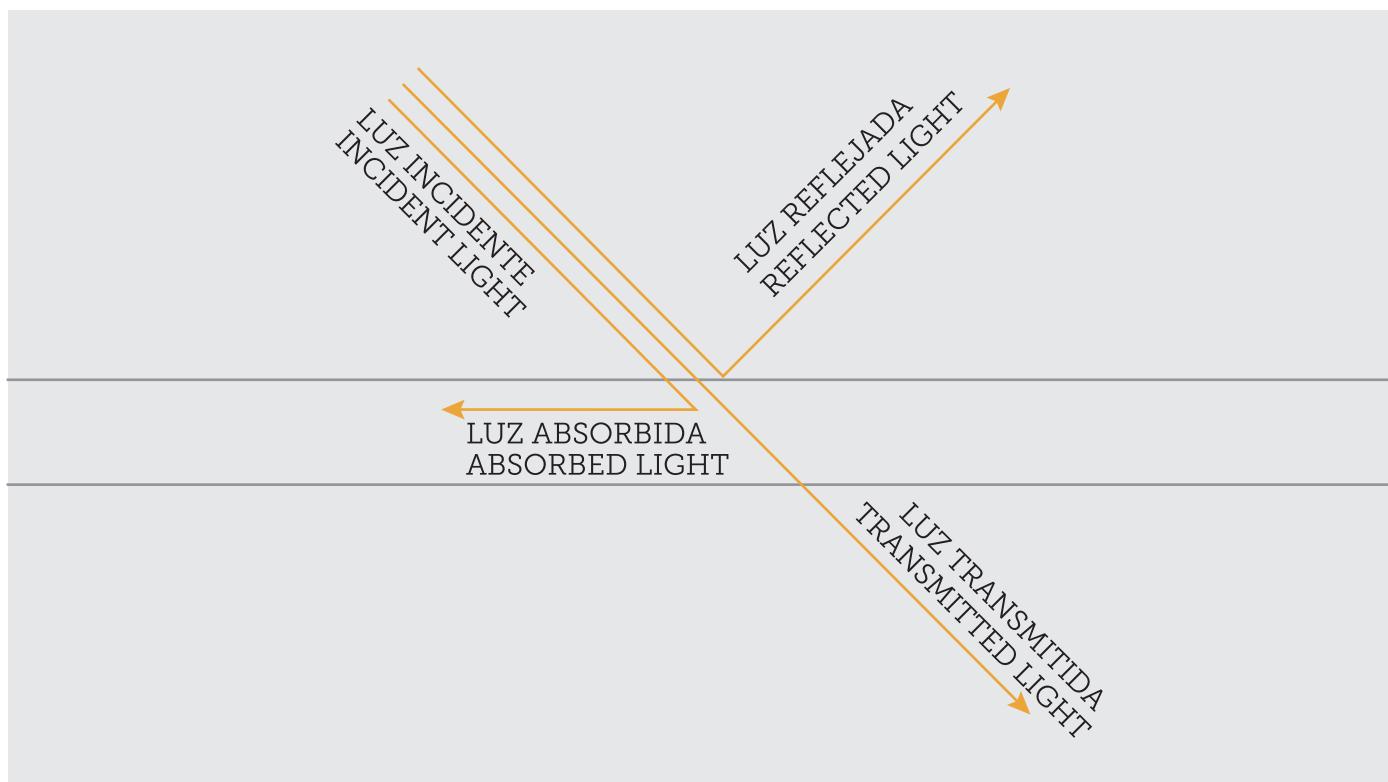

BEHAVIOUR OF LIGHT

La luz emitida por una fuente luminosa se comporta de manera diferente en función del medio en el que se encuentre o de la superficie a la que esté dirigida. Por este motivo, la elección de los materiales que utilizamos es igual de importante que la fuente en sí.

Cuando los rayos de luz inciden en una superficie pueden darse tres fenómenos:

The light emitted by a light source behaves differently depending on the surrounding medium or the surface onto which it is projected. For this reason the choice of the materials that we use is as important as the light source itself.

Three phenomena can occur when light rays strike a surface:

1.- Absorción:

Es el fenómeno según el cual la materia absorbe toda o parte de la luz visible que incide sobre esta.

Un material como el terciopelo negro absorberá gran parte de la luz, por el contrario una pared blanca reflejará la mayoría de la radiación recibida.

2.- Transmisión:

Tiene lugar cuando la luz incide sobre un material y pasa a través de este. En función de la transparencia tenemos **tres tipos de materiales**.

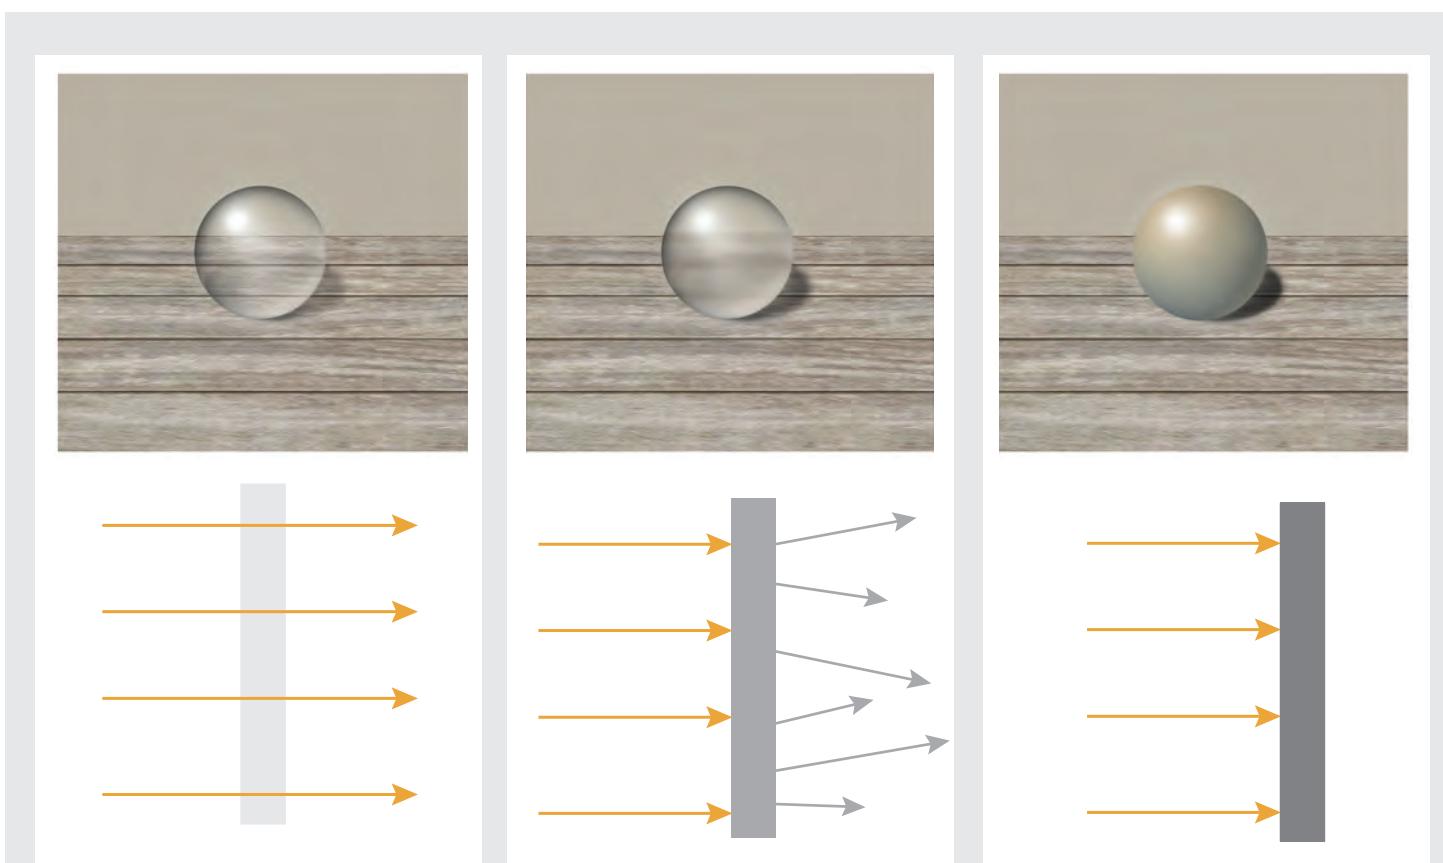

1.- Absorption:

This phenomenon occurs when the material absorbs all or part of the visible light that strikes it.

A material such as black velvet will absorb the majority of the light, while a white wall will reflect most of the radiation it receives.

2.- Transmission:

Transmission occurs when light strikes a material and passes through it. We can define **three types of material** according to their transparency.

Material transparente:

Aquel que deja pasar toda o gran parte de la luz.

Transparent Material:

Material that allows all - or a large part - of the light to pass through the material.

Material translúcido:

Aquel que deja pasar parte de la luz de manera difusa.

Translucent Material:

Material that allows light to pass through in a diffuse manner.

Material opaco:

Aquel que no deja pasar luz.

Opaque Material:

Material through which no light can pass.

La transparencia de un material se cuantifica como transmitancia, que es la proporción de luz que se transmite en relación con la luz que incide sobre este.

The transparency of a material is quantified as transmittance, which is the proportion of light transmitted in relation to the incident light striking the material.

3.- Reflexión:

Ocurre cuando los rayos de luz inciden sobre una superficie y tras chocar contra ella, vuelven al medio del que salieron.

3.- Reflection:

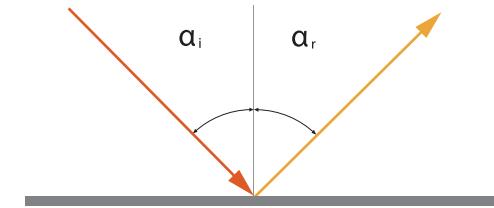

Reflection occurs when the light rays striking a surface return to the medium from which they came.

Reflexión especular:

Se produce en superficies muy lisas o pulidas, en las que el ángulo de incidencia de la luz es igual al ángulo de reflexión. Un espejo o un charco serían ejemplos de reflexión especular.

Specular reflection:

This occurs on very smooth or polished surfaces where the angle of the incident light is equal to the angle of the reflection. A mirror or a lake are examples of specular reflection.

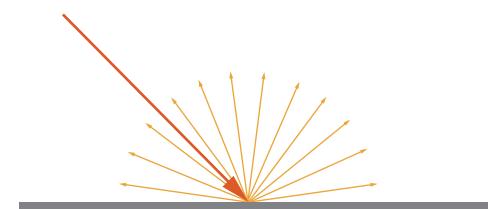

Reflexión difusa:

Se da en superficies rugosas o con cierta textura, sobre las que la luz incidente se refleja en todas direcciones. Ejemplos de estas serían pintura mate o ladrillo.

Diffuse reflection:

This occurs when light strikes rough surfaces or those with certain textures where the light is reflected in all directions. Examples of these surfaces are matt paint or brick.

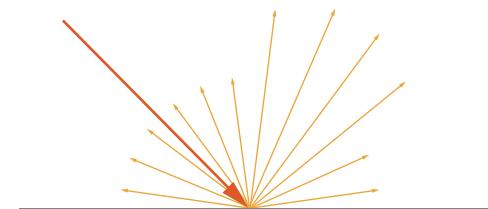

Reflexión compuesta:

Es una mezcla de ambas, una parte de la reflexión es especular pero a su vez tiene un componente de luz difusa. Se da en la mayoría de los materiales reales tales como por ejemplo metales corrugados o deslustrados.

Spread reflection:

This is a mixture of the other two: one part of the reflection is specular but there is also a diffuse component. It occurs in most real materials such as corrugated or tamished metals.

ORIGEN DEL DISEÑO DE LA ILUMINACIÓN

THE ORIGIN OF LIGHTING DESIGN

— RICHARD KELLY —

La consideración de la luz eléctrica como un "material" de construcción fue reconocida en los años 20, y evolucionó hasta convertirse en una potente herramienta de diseño hacia mediados de siglo. Hasta entonces la iluminación arquitectónica había estado dominada por un punto de vista de ingeniería, centrada en los niveles de iluminación para tareas específicas.

Richard Kelly (1910-1977) fue un diseñador de iluminación estadounidense, considerado uno de los pioneros del diseño de iluminación arquitectónica. Formado en iluminación teatral, Kelly aplicó su punto de vista escenográfico a la arquitectura, marcando un antes y un después en el diseño de iluminación. Sus ideas, aunque sencillas, fueron revolucionarias y han influenciado enormemente tanto la iluminación como la arquitectura moderna.

The consideration of electric light as a construction "material" was first recognised in the 1920s, and became a powerful design tool towards the middle of the last century. Until then architectural lighting had been dominated by an engineering point of view, centred on the lighting levels required for specific tasks.

Richard Kelly (1910-1977), an American lighting designer, is considered to be one of the pioneers of architectural lighting design. Kelly trained in theatrical lighting and applied his scenographic point of view to architecture, marking a turning point in lighting design. His ideas, although simple, were revolutionary and have enormously influenced both lighting and modern architecture

TEORÍA DE LA ILUMINACIÓN CUALITATIVA

La teoría de Kelly tiene diversas influencias, entre las que se encuentran los principios de la percepción, los elementos básicos de iluminación teatral o los efectos de luz que encontramos en la naturaleza. Kelly se aleja de la iluminancia uniforme como base para un proyecto de iluminación, sustituyéndola por la calidad de la luz.

Establece tres funciones básicas:

- Luz para ver
- Luz para mirar
- Luz para contemplar

THEORY OF QUALITATIVE LIGHTING

Kelly's theory has a number of influences, including the principles of perception, the basic elements of theatrical lighting and the light effects found in nature. Kelly moved away from uniform illumination as the basis for a lighting project, focusing instead on the quality of the light.

He established three basic functions:

- Ambient luminescence*
- Focal glow*
- Play of brilliants*

Luz para ver:

Luz indirecta o difusa que garantiza una iluminación general y plana para el entorno.

Ambient luminescence:

Indirect or diffuse light that guarantees general, flat, ambient lighting.

Luz para mirar:

Luz directa, enfocada.

A través del uso de la luz podemos transmitir información ya que las zonas iluminadas atraen involuntariamente la atracción de las personas.

Focal glow:

Direct, focussed light.

The use of light can transmit information as illuminated areas unconsciously attract people's attention.

Luz para contemplar:

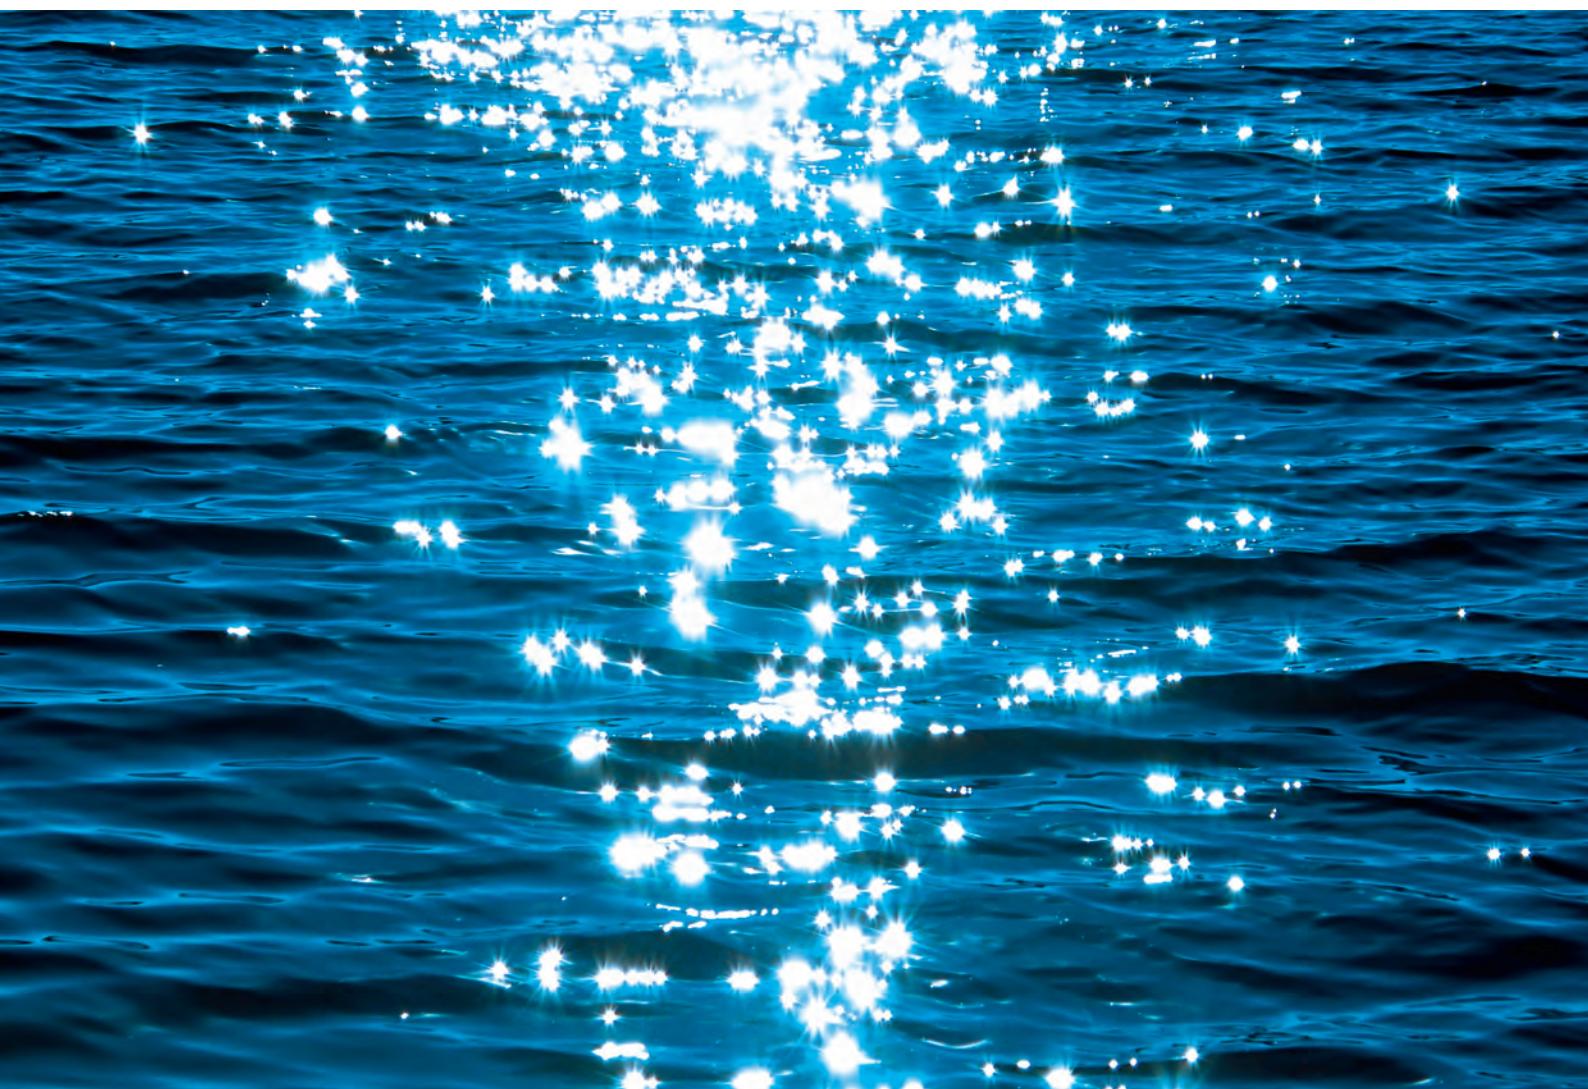

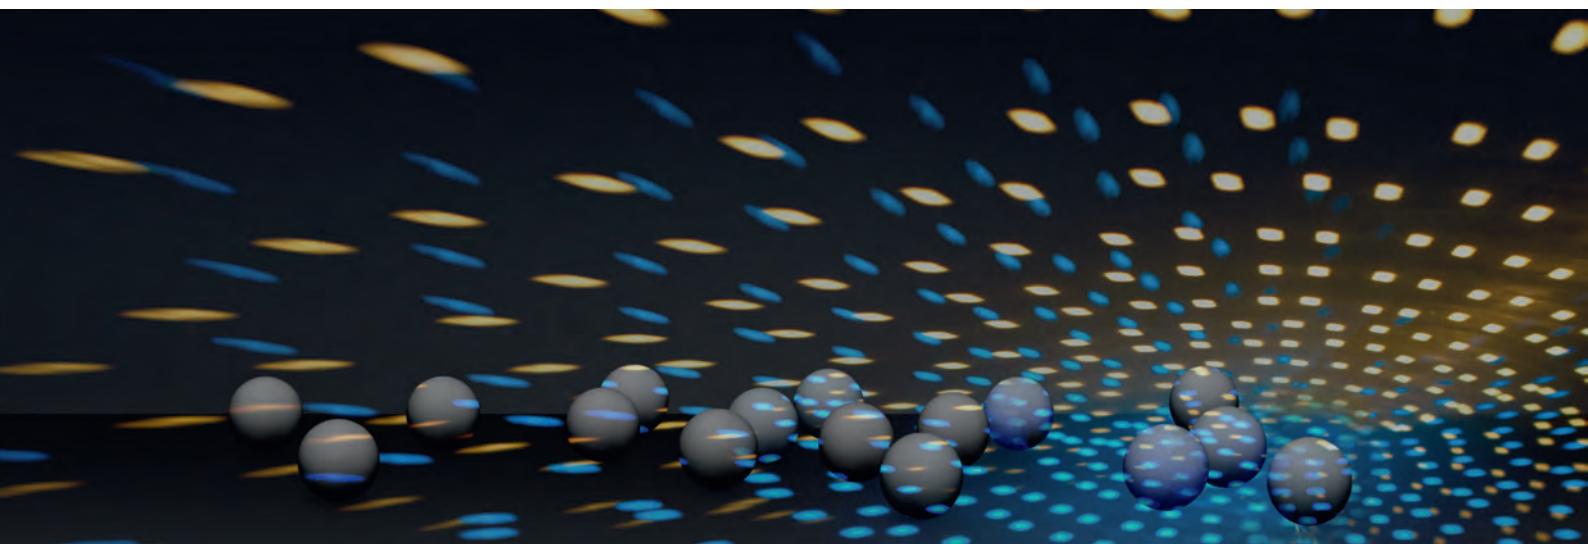

Patrón de luz o destello.

Esta luz no solo proporciona información acerca de los espacios u objetos iluminados, sino que es información en sí misma.

Play of brilliants:

Patterns of light or highlights.

This light not only provides information regarding the illuminated spaces or objects, but it is also information in itself.

EL CONTRASTE:

La información visual se compone de diferencias en niveles de iluminación, que el cerebro procesa de manera inconsciente. Lo que está más iluminado atrae la atención mientras que lo que no lo está pasa desapercibido: nuestra percepción es resultado del contraste.

Las relaciones de contraste sirven para cuantificar la diferencia entre iluminancias contiguas, que suelen ser la luz general y los acentos. Un espacio con contraste bajo (1:1) o normal (2:1) se lee como un espacio relativamente plano en el que no hay nada que resalte. Un contraste acentuado (3:1) permite comprender mejor el espacio y captar sus diferencias tanto desde un punto de vista estético como práctico, mientras que un contraste profundo (5:1) tiene un efecto dramático o teatral que se utiliza generalmente con fines estéticos.

El uso del contraste ha de combinar el confort visual con la jerarquización de los espacios u objetos.

CONTRAST:

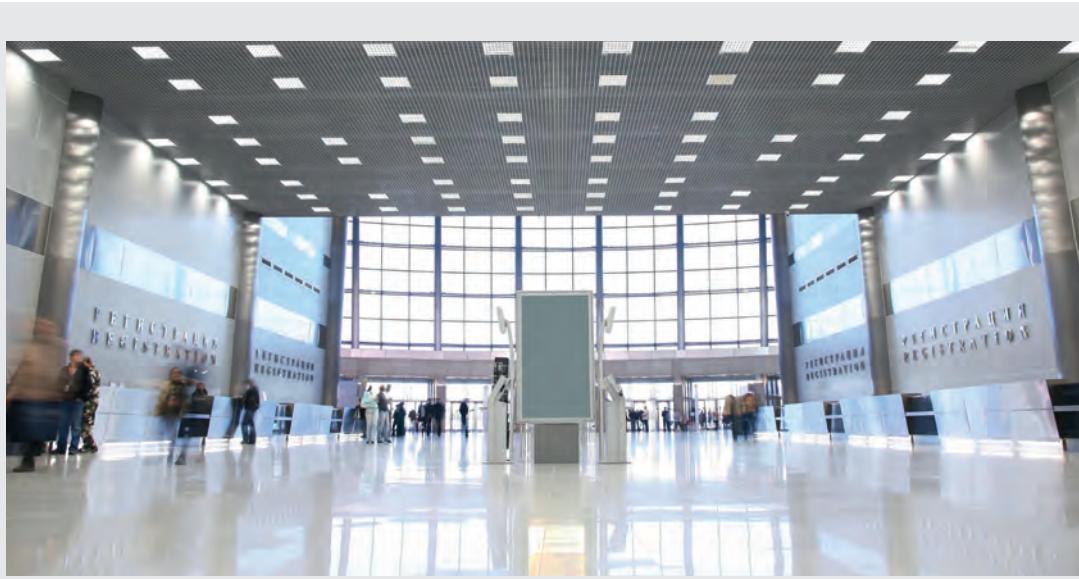

Visual information is composed of different lighting levels, which the brain processes unconsciously. Bright lighting attracts the attention while unlit areas go unnoticed: our perception is a result of contrast.

Degrees of contrast quantify the difference between adjacent illuminated areas, which are often lit by ambient light and accents. A space with low contrast (1:1) or normal contrast (2:1) is seen as a relatively flat space without highlights. An accentuated contrast (3:1) provides a greater understanding of the space and captures its differences from both an aesthetic and practical point of view, while a deep contrast (5:1) has a dramatic or theatrical effect that is generally used for aesthetic purposes.

The use of contrast has to combine visual comfort with the hierarchical classification of spaces or objects.

LA LUZ Y LA EXPERIENCIA DE COMPRA

LIGHT AND THE SHOPPING EXPERIENCE

Recientemente hemos observado cómo retail y arquitectura desarrollaban una relación cada vez más estrecha. Los espacios comerciales han pasado de ser meros lugares donde realizar compras para convertirse en una extensión física, palpable, de las marcas o productos. Asimismo, el comercio online crece exponencialmente mientras que el comercio tradicional desaparece, y las tiendas ven reducido su tamaño.

Las tiendas ahora sirven un propósito adicional: encarnar el concepto de la marca. El futuro del comercio pasa por conectar con los clientes, escucharles, entender sus necesidades y proporcionarles experiencias agradables y placenteras. Se trata no solo de vender, sino de construir la imagen de la marca y de generar una conexión emocional que fidelice a los clientes.

Está demostrado que aspectos claves en el comportamiento del comprador no se han tenido en consideración hasta ahora. El nuevo enfoque incluye estética, aspectos multisensoriales e incluso el disfrute y la diversión como parte de la experiencia de compra.

Los espacios de compra se convierten en el lienzo perfecto sobre el cual los expertos en iluminación pueden expresarse de manera innovadora y crear algo mágico. El objetivo ya no es solo iluminar el producto por un motivo meramente práctico, sino crear una experiencia que el cliente no olvidará. Las tiendas se han convertido en un fenómeno cultural y son una oportunidad excepcional en la que experimentar con luz y sensaciones.

We have increasingly noticed that retail and architecture have been developing an ever-closer relationship. Commercial spaces have changed from being mere places to sell things and have become a physical, palpable extension of the brands or products. Additionally, buying over the internet is growing exponentially, while traditional shopping is disappearing and shops are reducing in size.

Shops now have an additional purpose: to embody a brand's image. The future of shopping involves connecting with customers, listening to them, understanding their needs and providing them with agreeable and pleasant experiences. It is no longer enough just selling, shops have to build a brand's image and make an emotional connection that encourages customer loyalty.

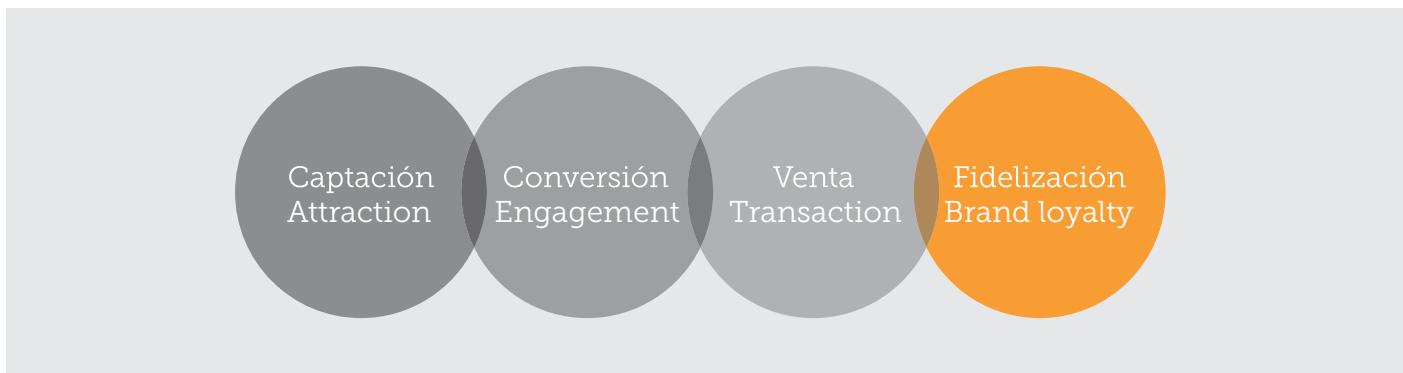

It is demonstrable that key aspects of the purchaser's behaviour have not been taken into consideration until now. The new focus includes aesthetics, multisensory aspects and even enjoyment and fun as part of the shopping experience. Shopping spaces are becoming the perfect canvas on which lighting experts can express themselves in an innovative way, allowing them to create something magical. The objective now is not just to simply light a product in a practical way, but also to create an unforgettable experience for the customer. Shops have become a cultural phenomenon and are an exceptional opportunity for experimenting with light and sensations.

ILUMINACIÓN EN RETAIL

La iluminación de una tienda puede jugar un papel fundamental en el proceso de compra. Hay cuatro fases clave claramente diferenciadas dentro de este proceso, y en cada una de ellas podemos utilizar diferentes estrategias de iluminación.

LIGHTING IN RETAIL

A shop's lighting can play an important role in the shopping process. There are four key, clearly differentiated phases within this process and we can use different lighting strategies in each of them.

1.- CAPTACIÓN

En esta fase del proceso el objetivo es atraer la atención de los compradores y conseguir que entren en la tienda.

Escaparate

El escaparate es la carta de presentación de la tienda, es un expositor cuyo objetivo es atraer a clientes al interior. Como tal, ha de representar fielmente la estética y el ambiente de la tienda a la vez que realza los productos expuestos. Se trata de atraer clientes hacia el interior.

Factores a tener en cuenta:

• Cantidad de luz:

Es muy importante analizar el entorno en el cual se encuentra el escaparate para definir la estrategia de iluminación a utilizar. Si el escaparate es interior, como por ejemplo en un centro comercial, la iluminación será constante a lo largo del día, mientras que en una tienda a pie de calle debemos tener en cuenta la iluminación natural. La cantidad de luz en el entorno inmediato del escaparate determinará el nivel necesario para realzar la mercancía.

• Calidad de la luz:

El tipo de luz ha de ser consistente con la imagen de la tienda. Del mismo modo que los productos expuestos mandan un mensaje acerca de la estética de la tienda o el tipo de cliente al que está dirigida, la iluminación también sirve para trasladar un mensaje acerca del tipo de comercio. El cliente identifica inconscientemente cada tipo de tienda con una iluminación diferente. Un outlet store generalmente tiene una iluminación plana y fría mientras que una tienda de lujo se caracteriza por una iluminación más cálida y puntual. Podemos utilizar esta información para mandar un mensaje acerca de nuestro tipo de comercio.

1.- ATTRACTION

The objective of this phase is to attract the attention of the shoppers and ensure that they enter the shop.

Shop window

The shop window is the shop's letter of recommendation; it is a display whose purpose is to attract the customers inside. It, therefore, has to faithfully represent the shop's aesthetic and atmosphere while enhancing the displayed products. It relates to attracting customers into the shop.

Factors to take into account:

• Amount of light:

It is very important to analyse the shop window's location and surroundings in order to define the best lighting strategy to use. If the shop window is within a built environment, such as, for example, in a shopping centre, the lighting can be constant throughout the day, while the lighting of a shop in the street should take natural lighting into account. The amount of light in the shop window's immediate surroundings will determine the levels necessary to enhance the goods on display.

• Quality of the light:

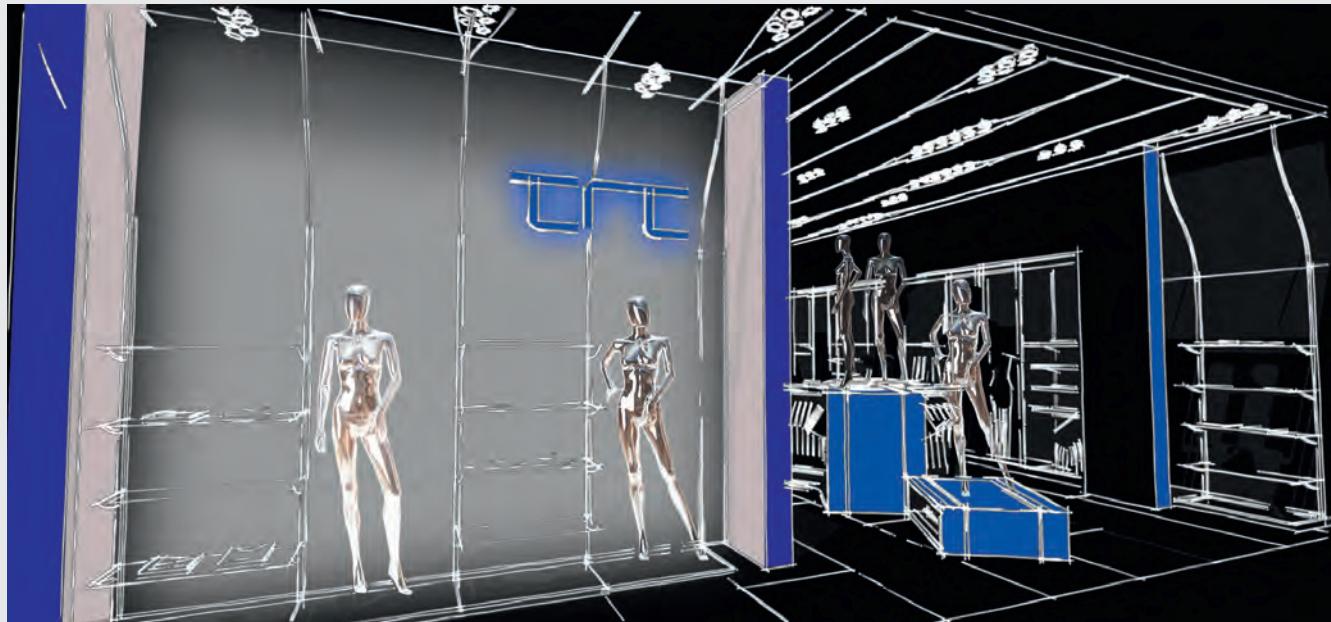

The type of light has to be consistent with the shop's image. In the same way that the displayed articles send a message about the shop's aesthetic or the type of customer it is aimed at, the lighting also acts to transmit a message regarding the business. Customers unconsciously identify different lighting schemes with different types of shop. An outlet store generally has flat, cold lighting while a luxury shop is characterised by warmer more focussed lighting. We can use this information to send a message regarding our type of business.

• **Tipo de luz:**

Al igual que en el resto de espacios, en un escaparate podemos diferenciar tres tipos de iluminación:

• **Type of light:**

As in other areas, it is possible to differentiate between the types of lighting in a shop window:

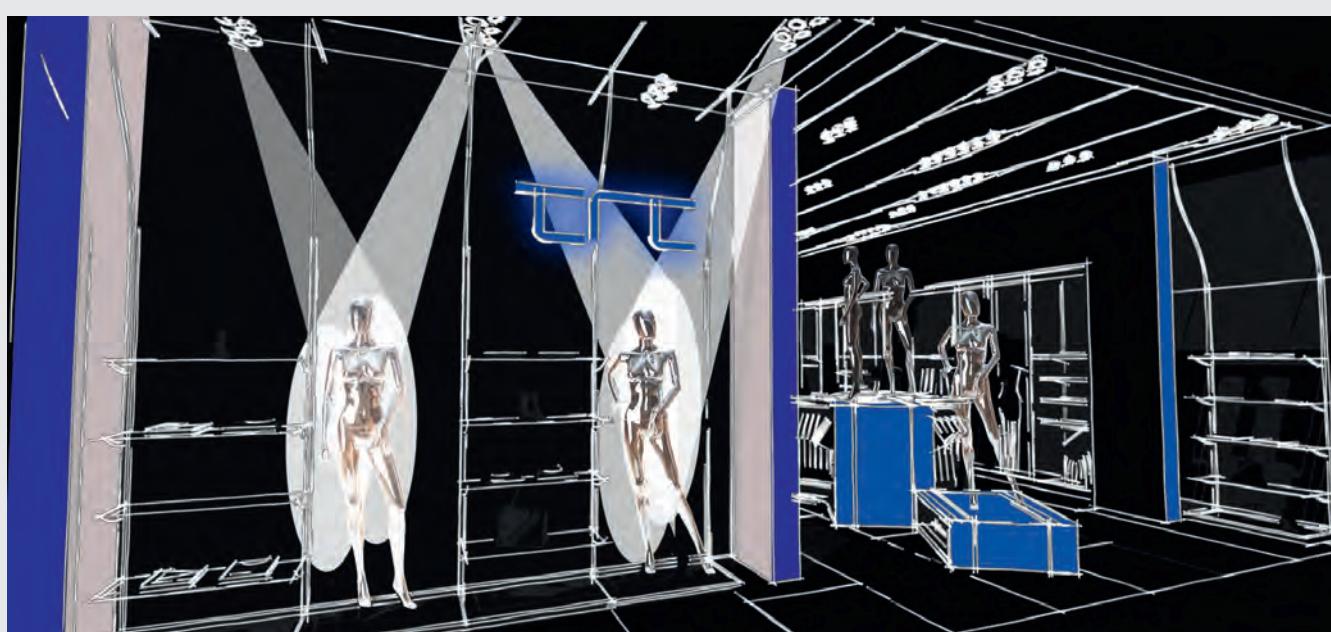

Luz para ver o iluminación general:

Limita visualmente el espacio de la intervención y crea uniformidad.

Ambient or general lighting:

Light that visually defines the intervention space and creates uniformity.

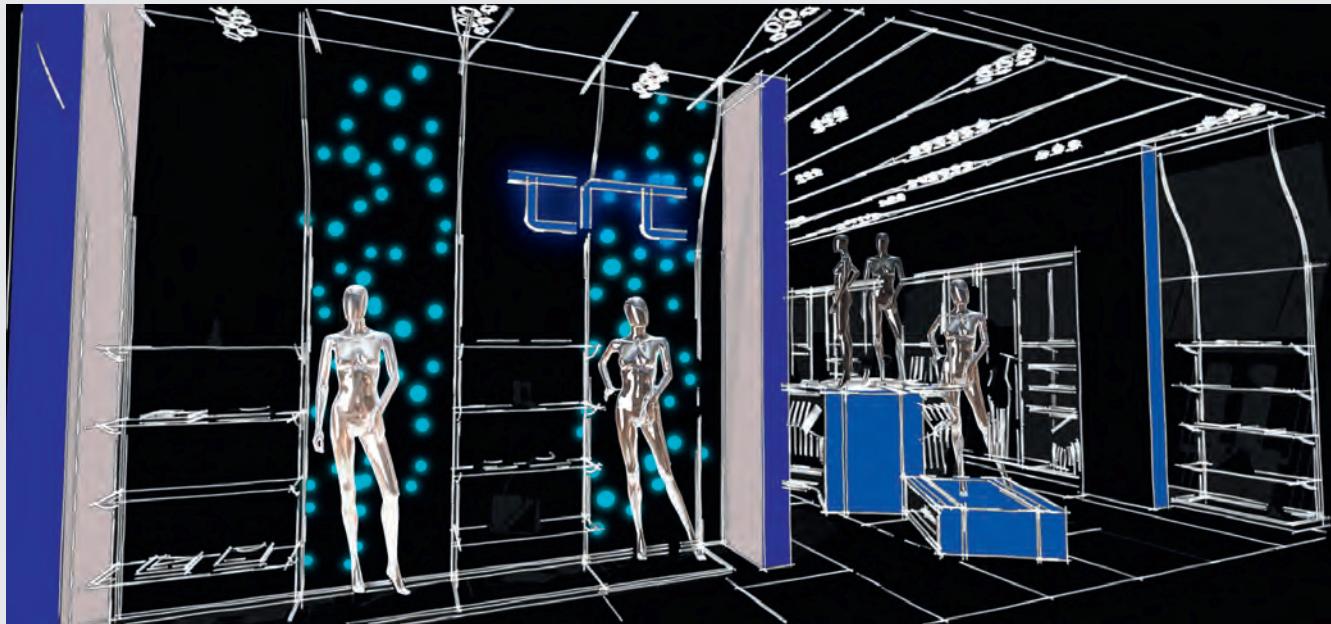

Luz para mirar o iluminación puntual:

Realza determinados productos creando un contraste y jerarquizando el espacio.

Accent or spot lighting:

Light that enhances certain products by creating a contrast and a spatial hierarchy.

Luz para contemplar o iluminación decorativa:

Tiene una función meramente estética.

Scenic or decorative lighting:

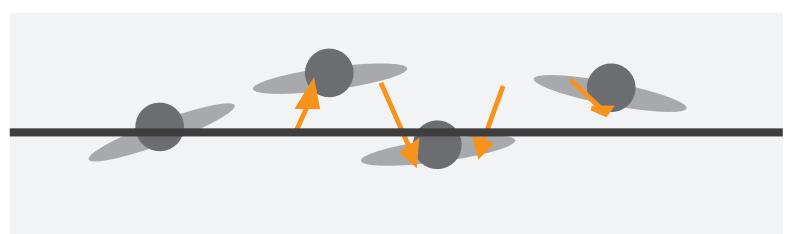

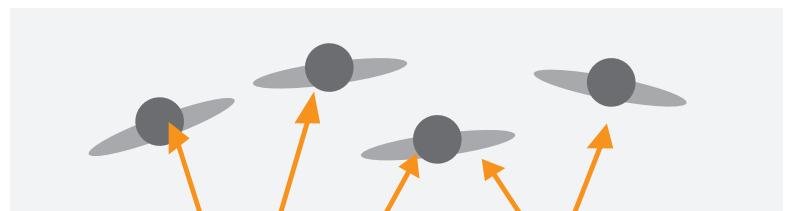

Light for purely aesthetic purposes.

• Deslumbramiento:

La ubicación y orientación de las luminarias son dos factores clave a tener en cuenta para evitar el deslumbramiento. Las luminarias han de orientarse hacia el interior del escaparate, y no hacia el exterior. Lo ideal es colocar las luminarias entre el objeto a iluminar y el espectador, de manera que el producto quede iluminado frontalmente.

• Glare:

The position and aiming of the light fittings are two of the key factors to keep in mind in order to avoid glare. The lights must be aimed towards the shop window's interior and not towards the exterior. Ideally we should place the fittings between the object to be lit and the viewer so that the product is lit from the front.

• Índice de reproducción cromática:

La mercancía en el escaparate debe ser correctamente representada, por lo que es importante utilizar lámparas que reproduzcan fielmente los colores.

• Flexibilidad:

Una distribución fija de las luminarias va a condicionar la iluminación enormemente. La iluminación mediante un carril con proyectores es ideal ya que nos permite modificar la cantidad de puntos de luz, la ubicación de los mismos o sus ángulos de apertura y así adaptar la iluminación a los cambios en el escaparate.

• Color/Luz dinámica:

El uso de luz de color o luz dinámica es cada vez más popular en escaparates, y es efectiva a la hora de atraer la atención de los consumidores. Se recomienda utilizarla de manera puntual o para crear ambiente, ya que su uso extensivo distorsiona los colores y puede resultar visualmente molesto.

• Colour rendering index:

The merchandise in the shop window should be properly represented, so it is important to use lights that faithfully reproduce its colours.

• Flexibility:

A fixed layout of the light fittings will strongly influence the lighting. Lighting using a track with spot lights is ideal as it allows us to change the number of light points, their location or their beam angle, thereby adapting the lighting to changes in the shop window.

• Dynamic colour/light:

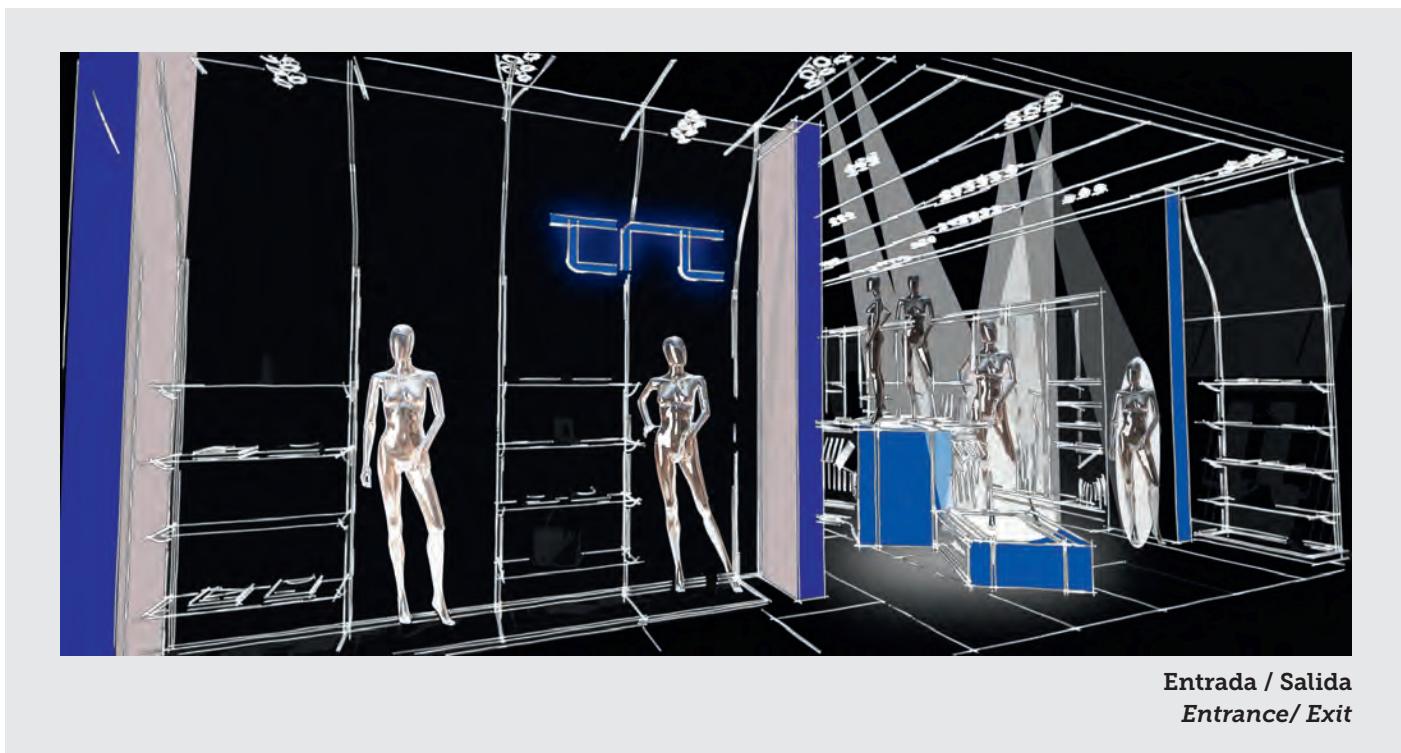

The use of coloured light or dynamic light is increasingly popular in shop windows and it is effective in attracting a customer's attention. It is best used in a limited way or to create atmosphere, since extensive use will distort the colour and could be visually annoying.

Entrada/Salida

Al igual que el escaparate, la entrada ha de servir para atraer la atención del cliente desde el exterior. Utilizamos los niveles de iluminación para jerarquizar el espacio por lo que en la entrada es recomendable utilizar niveles más elevados que en el resto. Asimismo, desde el interior la entrada ha de ser claramente identificable para agilizar el proceso de compra.

Entrance/Exit

Just like the shop window, the entrance has to attract the customer's attention from the outside. We use light levels to prioritise the space. Therefore it is advisable to use higher light levels in the entrance than in the other areas. The entrance must also be clearly identifiable from the interior to enhance the shopping experience.

2.- CONVERSIÓN

En esta fase del proceso el objetivo es que el cliente se sienta atraído por el producto, y pase de ser un visitante para convertirse en comprador potencial.

Zona de venta

Se trata de conseguir que el cliente se sienta a gusto en la tienda, para lo cual debemos crear una atmósfera agradable, al mismo tiempo que realzamos el producto, concentrado en expositores, maniquíes o estanterías.

Factores a tener en cuenta:

• Tipo de luz:

Luz para ver o iluminación general:

Con luminarias situadas en los techos, garantiza la comprensión del espacio, la identificación de las diferentes zonas y la circulación principal. Los niveles han de cuidarse, una iluminación demasiado tenue puede resultar incómoda mientras que un nivel demasiado elevado es visualmente molesto y puede crear deslumbramiento.

Luz para mirar o iluminación puntual:

Mediante el uso de luminarias de techo con haces más intensivos o incorporando luz dentro del propio mobiliario, podemos realizar zonas concretas de la tienda consiguiendo así captar la atención de los compradores.

Requieren iluminación de acento varios elementos dentro de la tienda:

Maniquíes/Displays de pared:

Requieren altos niveles de iluminación en el plano vertical por lo que la disposición de las luminarias en relación con el objeto ha de estar cuidada. Si se colocan demasiado lejos pueden provocar deslumbramiento, mientras que si se colocan inmediatamente sobre los mismos generan sombras muy duras. Suelen orientarse de manera que los haces se crucen, consiguiendo así que la luz llegue al producto independientemente de donde se encuentre el observador, y evitando sombras.

Estanterías:

Conseguir un buen nivel de iluminación en estanterías únicamente mediante luminarias ubicadas en el techo es muy complicado, ya que las propias baldas arrojan sombra unas sobre las otras. Una estrategia efectiva es incorporar iluminación lineal o puntual en las mismas, de manera que no solo conseguimos un nivel óptimo sino que atraemos más atención sobre las mismas.

2.- ENGAGEMENT

The objective of this phase of the process is to ensure that the customer feels attracted by the product and changes from being a visitor to being a potential buyer.

Sales area

The customer should be made to feel at ease in the shop, and therefore we need to create a pleasant atmosphere while also enhancing the product by focussing on the exhibits, mannequins or shelves.

Factors to take into account:

• Type of light:

Ambient or general lighting:

Ceiling lights ensure an understanding of the space, the identification of different areas and the main walkways. Care has to be taken with the lighting levels: excessively tenuous lighting can be uncomfortable while an over-bright lighting scheme is visually annoying and can create glare.

Accent or spot lighting:

We can create specific areas within the shop using ceiling lights with more intensive beams or incorporating light within shop fittings to draw the shopper's attention.

There are a number of elements within the shop that require this type of accent lighting:

Mannequins/Wall displays:

Care must be taken with the lighting arrangement as these elements require high light levels on the vertical plane. Locating lights too far away can create glare, while if they are located immediately above the elements they can create harsh shadows. They are usually arranged so that their beams intersect. This avoids shadows as the light reaches the product in a uniform manner and does not change with the observer's position.

Shelves:

Getting a good level of illumination on shelves only using ceiling-mounted lights is extremely difficult as the shelves cast shadows on each other. An effective strategy is to incorporate linear or spot lighting within the shelves. This not only ensures optimum lighting levels but also attracts more attention to the shelves.

Estanterías / Shelves

Luz para contemplar o iluminación decorativa:

Completa la estética de la tienda, suele conseguirse mediante el uso de luminarias decorativas o apliques.

• Calidad de luz:

Tanto la temperatura de color como el índice de reproducción cromática han de ser consistentes a lo largo del espacio. La mezcla de lámparas con diferente IRC o TC provoca un desorden visual que no es agradable estéticamente, por lo que hay que tener esto en cuenta a la hora de realizar las tareas de mantenimiento.

• Contraste:

El uso del contraste es esencial para conseguir un efecto de iluminación dinámico en el que destacamos algunos elementos, pero debe evitarse que sea demasiado pronunciado ya que puede provocar fatiga visual y problemas de adaptación.

El contraste no se obtiene únicamente mediante diferencias en los niveles de iluminación, podemos conseguirlo también mediante el uso de luz de color.

Scenic or decorative lighting:

Complements the shop's aesthetics and is usually achieved through the use of decorative or wall lighting

• Quality of the light:

A colour's temperature as well as its rendering index must be consistent across the lit space. Mixing lights with different CRI or CT provokes a visual disorder that is not aesthetically pleasing, so this should be considered when performing maintenance tasks.

• Contrast:

The use of contrast is essential for a dynamic lighting effect that highlights certain elements, but it should not be too pronounced as this can cause visual fatigue and adjustment problems.

Contrast is not only obtained using differences in lighting levels, but can also be achieved by the use of coloured lighting.

3.- VENTA

El objetivo de la experiencia de compra es la venta. La iluminación juega un papel importante en ayudarnos a localizar el producto que queremos y en hacerlo atractivo dentro del probador.

Probadores

La estrategia de iluminación de una tienda ha de culminar con una adecuada iluminación en los probadores. Está demostrado que más de la mitad de las ventas se deciden aquí, por lo que aspectos como el IRC, la temperatura y la disposición de los puntos de luz son más importantes que en cualquier otro espacio. A diferencia del resto de la tienda, donde intentamos evitar la iluminación "plana", aquí una iluminación general difusa favorece como nos vemos en el espejo.

La clave de la iluminación en un probador es encontrar el equilibrio entre la luz frontal superior y la iluminación frontal/ lateral. La luz frontal superior colocada a 45 grados se percibe como muy natural, no genera sombras duras y resalta la forma y la textura de las prendas, mientras que la luz lateral/frontal elimina por completo las sombras y nos hace vernos más atractivos.

En caso de disponer únicamente de luz superior, esta ha de estar siempre entre la persona y el espejo, y es preferible utilizar dos puntos de luz de menos intensidad a uno muy potente, ya que de esta manera eliminamos las sombras muy pronunciadas y conseguimos un efecto más uniforme.

3.- TRANSACTION

Sales are the objective of the shopping experience. Lighting plays an important role in helping us to find the product we want and making it attractive when we take it to the changing room.

Changing rooms

A shop's lighting strategy must culminate in suitable lighting in the changing rooms. It has been shown that more than half of sales are decided here, and therefore aspects such as the CRI, temperature and the arrangement of the light sources are more important here than in any other space. In contrast to the rest of the shop, where we try to avoid "flat" lighting, in the changing room a general, diffuse lighting favours how we see ourselves in the mirror.

The key to lighting a changing room is to find the balance between top/front lighting and front/side lighting. Top/front lighting placed at an angle of 45 degrees is perceived as very natural since it does not create harsh shadows and highlights the shape and texture of the clothes, while front/side lighting completely eliminates shadows and enhances our perception of our own image.

Where there is only top lighting it should always be between the person and the mirror and it is preferable to use two less-intense light sources than one stronger source, as this eliminates pronounced shadows and achieves a more uniform effect.

Probadores *Changing rooms*

"La clave de la iluminación en un probador es encontrar el equilibrio entre la luz frontal superior y la iluminación frontal/ lateral."

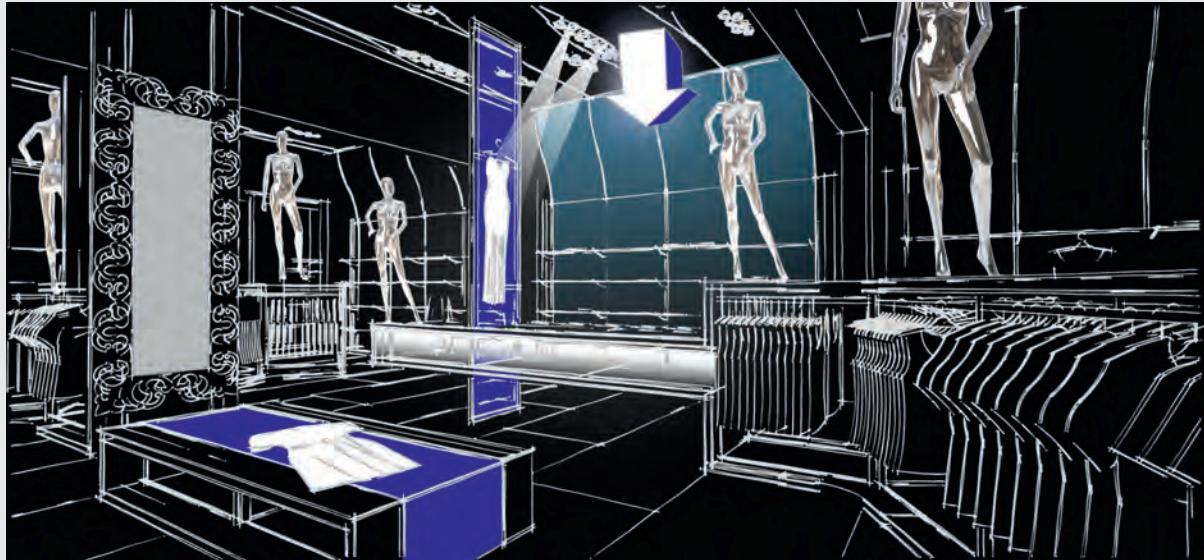

"The key to lighting a changing room is to find the balance between top/front lighting and front/side lighting."

Cajas

La iluminación en la zona de cajas tiene una doble función, por un lado sirve para señalizar claramente la localización y agilizar así el proceso de pago, a la vez que ha de ser lo suficientemente elevada como para que este pueda realizarse correctamente.

Checkouts

The lighting of the checkout area has a dual purpose: on the one hand it clearly indicates the location and thus speeds up the payment process, while it also has to be strong enough to ensure that the process can be properly performed.

Cajas / Checkouts

4.- FIDELIZACIÓN

Las empresas gastan millones de euros al año en construir relaciones con sus clientes, porque son estas las que garantizan la fidelidad. Cuando un cliente compra un producto con el cual hay implicación emocional, es muy difícil romper ese vínculo. A pesar de que el producto constituye el más importante componente en la experiencia de compra, la corriente de asociaciones mentales que se producen durante el consumo, ya sean imágenes, sensaciones, sueños o emociones pueden ser igualmente importantes en condicionar el comportamiento del consumidor. Podemos utilizar la iluminación para fortalecer ese vínculo entre tienda y cliente, creando un espacio en el que el cliente se sienta a gusto y al que le apetezca volver una y otra vez.

4.- BRAND LOYALTY

Companies spend millions of euros a year on building relationships with their customers in order to ensure their loyalty. When a customer buys a product with which they feel an emotional involvement it is very difficult to break that bond. Even though the product is the most important component of the shopping experience, the flow of mental associations produced during the purchase - whether images, sensations, dreams or emotions - can be just as important in conditioning the consumer's behaviour.

We can use lighting to strengthen this bond between the shop and the customer, creating a space in which the customer feels comfortable and to which they want to return time and again.

ILUMINACIÓN EN SUPERMERCADOS

De la misma manera que las tiendas han cambiado en los últimos años, convirtiéndose en espacios representativos en sí mismos, los supermercados también han sufrido una evolución. Una atmósfera más agradable se traduce en visitas más largas por parte de los clientes, y por tanto más ventas.

PASILLOS

El objetivo es conseguir una iluminación homogénea en el espacio, con niveles más elevados en las estanterías para dirigir la atención del comprador. Las luminarias se colocan centradas en los pasillos por lo que la utilización de ópticas dobles asimétricas garantizan que la mayor parte de la luz sea dirigida a las estanterías.

SUPERMARKET LIGHTING

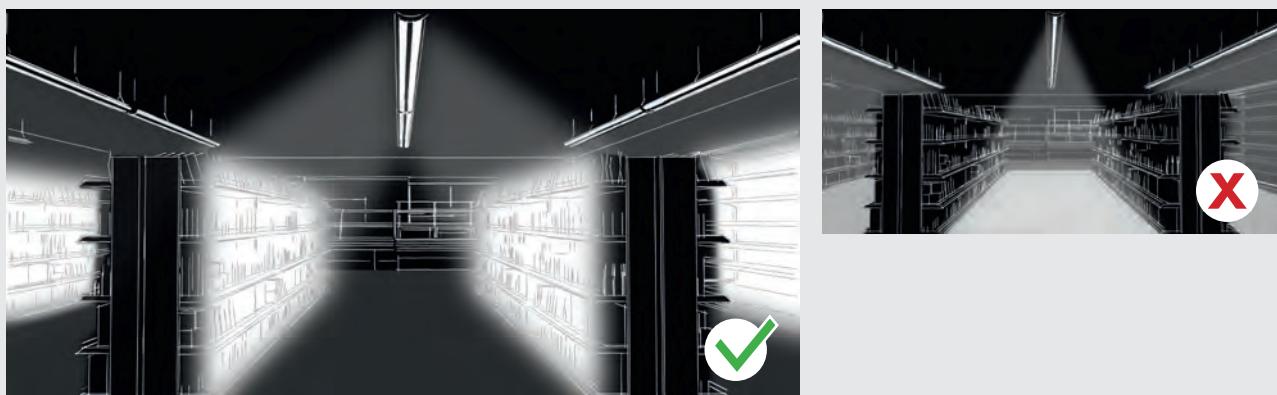

In the same way that shops have changed in recent years, becoming representative spaces in themselves, supermarkets have also undergone changes. An agreeable atmosphere translates into longer visits by the customers and therefore more sales.

AISLES

The objective is to achieve uniform lighting in this space, with higher light levels on the shelves to direct the customer's attention. Lights are positioned in the centre of the aisles while the use of asymmetric double optics guarantees that the majority of the light is directed onto the shelves.

Estanterías / Shelves

Pasillos / Aisles

CABECERAS DE GÓNDOLA

Es recomendable utilizar unas luminarias diferentes, generalmente con un haz más potente e intensivo. Así conseguimos contraste con el resto del espacio y destacamos esta zona. Esta iluminación de acento puede aplicarse en cualquier otra zona que queramos diferenciar del entorno próximo.

VINOS / ÁREAS GOURMET

La bodega o zona delicatessen es un espacio en el que el cliente se detiene y ha de crearse un espacio agradable. Estos espacios han de estar claramente diferenciados del resto, por lo que suelen utilizarse niveles de iluminación más bajos, mayor contraste, fuentes de luz cálidas y luminarias puntuales. Se recomienda una TC de 3000K.

GONDOLA ENDS

It is best to use different light fittings here, generally with a stronger and more intense beam. This provides contrast with the rest of the space and highlights the area.

This accent lighting can be applied to any other areas we want to differentiate from their surroundings.

DELICATESSEN / WINE AREAS

The wine shelves and the deli zone are areas where the customer pauses, so it is important to create a pleasant space. These areas must be clearly differentiated from the others, so lower light levels are generally used with greater contrast, warmer light sources and spot lights. A CT of 3000 K is recommended.

PRODUCTOS FRESCOS

Se trata de presentarlos de manera que se realce la frescura de los mismos. Se debe elegir cuidadosamente la temperatura de color y el índice de reproducción cromática adecuados para cada uno de manera que consigamos realzar los colores naturales de los productos.

FRESH PRODUCE

These areas are presented so that the freshness of the produce is highlighted. The colour temperature and the colour rendering index should be chosen carefully for each one in order to enhance the products' natural colours.

	 Dorados Golden		TC: 2700K IRC: 85
	 Azules y blancos Blue and white		TC: 6000K IRC: 85
	 Rojos y rosados Red and pink		TC: 3000K IRC: 85
	 Diversidad de colores Multiple colours		TC: 3000K IRC: 90
	 Amarillos, naranjas y blancos Yellow, orange and white		TC: 2700K / 3000K IRC: 85 / 90

ALMACENES

La iluminación del almacén es puramente funcional. Para garantizar la rápida localización de los productos y minimizar errores debemos proporcionar niveles elevados y consistencia a lo largo del espacio. Las luminarias suelen ubicarse entre los pasillos del mismo y a una altura de seguridad, por lo que han de elegirse fuentes con una larga vida útil para evitar problemas de mantenimiento.

Los sistemas de control permiten ahorrar energía mediante dispositivos de control de presencia, temporizadores o sensores de luz en caso de almacenes con aportación de luz natural.

WAREHOUSES

Warehouse lighting is purely functional. To ensure the rapid location of the products and to minimise errors we have to provide consistent, elevated lighting levels throughout the space. The lights are normally located at a safe height above the aisles, and therefore durable light sources must be chosen to avoid maintenance problems.

Control systems allow energy saving through the use of presence-control devices, timers or light sensors in warehouses with a natural light contribution.

APARCAMIENTOS

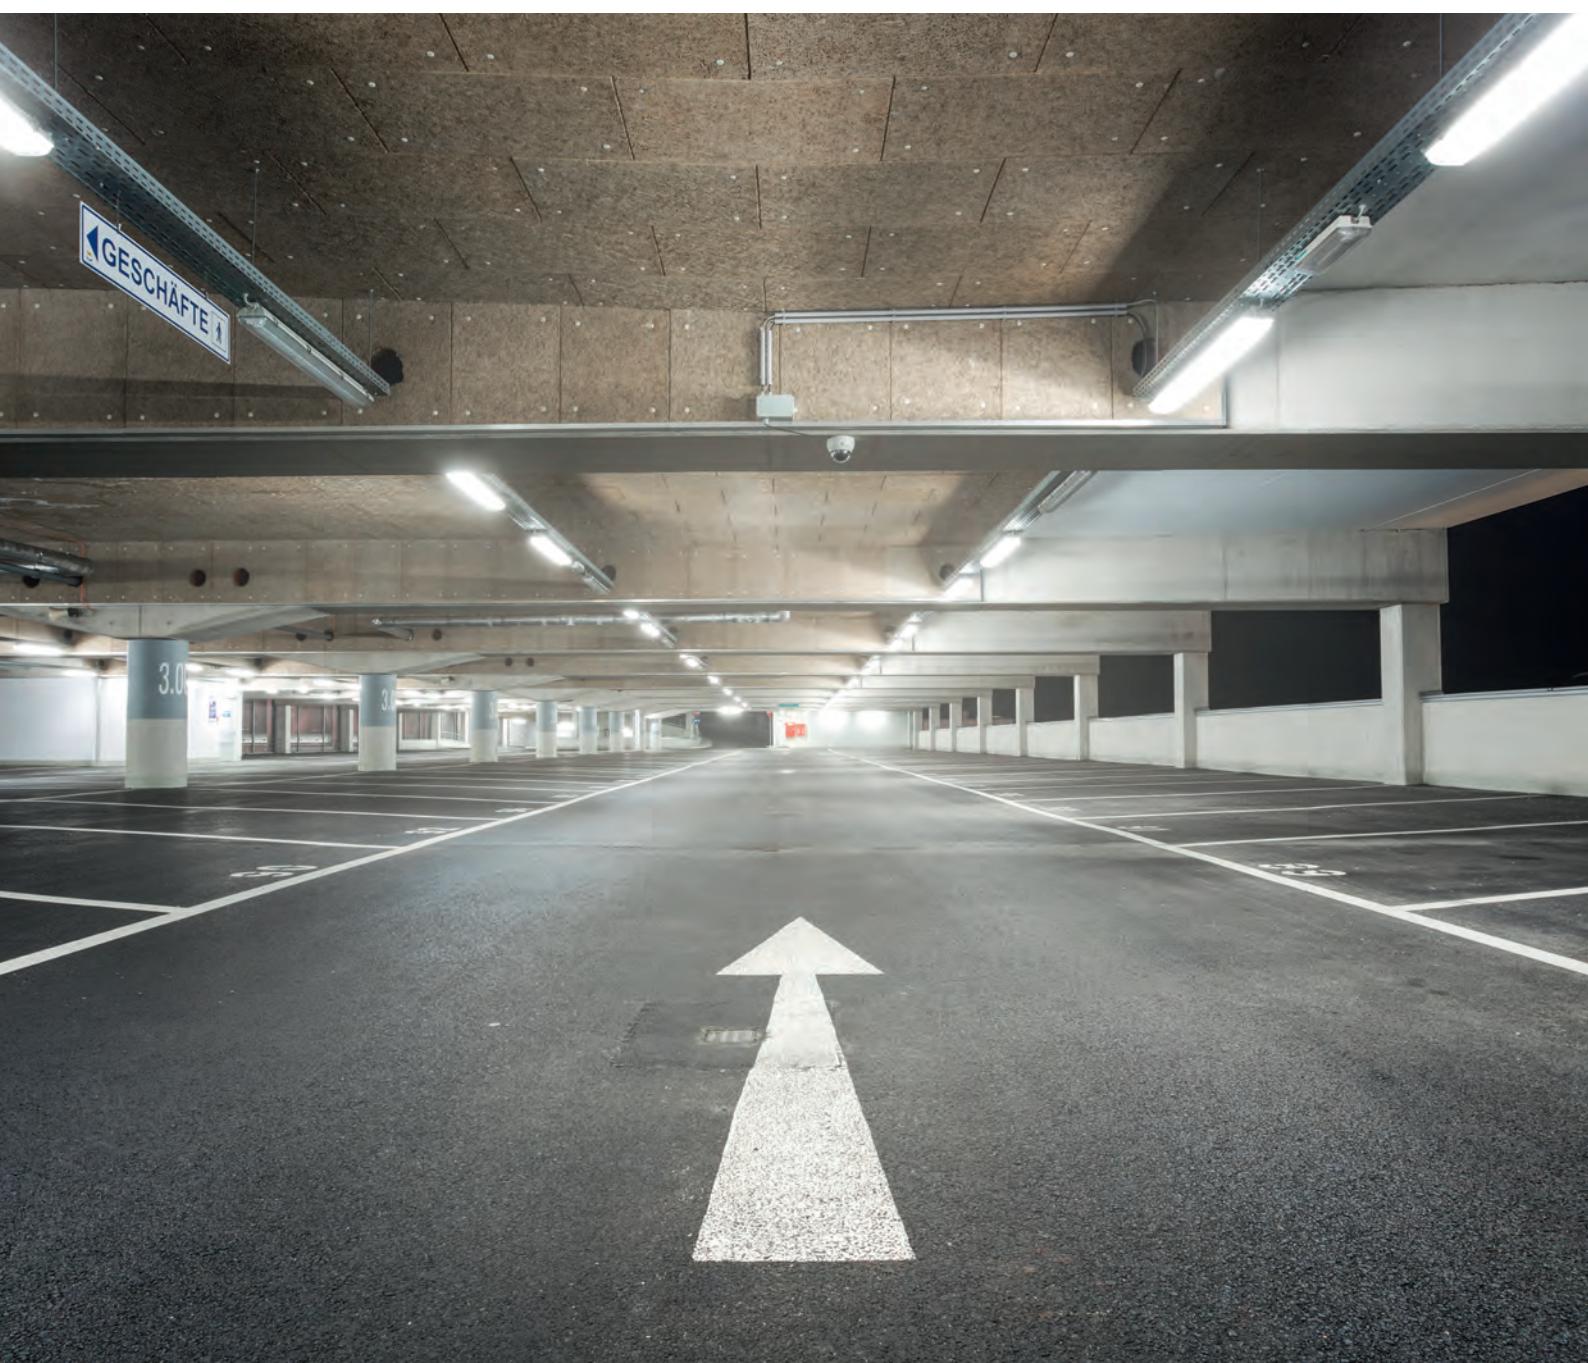

La función de la iluminación en aparcamientos es doble, ha de permitir la rápida identificación de la entrada al comercio, a la vez que garantiza la seguridad tanto para el peatón como para el conductor. Las luminarias se eligen en función de la disposición de los vehículos, de los patrones de circulación o del tipo de aparcamiento, que puede ser interior o exterior.

Los niveles han de ser suficientes para la clara identificación de los vehículos así como de las personas. El reconocimiento facial es clave para transmitir seguridad a los usuarios.

CAR PARKS

Car park lighting has a dual purpose; it must allow rapid identification of the entrance and ensure the safety of both pedestrians and drivers. The lights are chosen in relation to the layout of the vehicles, movement patterns or whether the car park is internal or external.

As facial recognition is key to providing users with a sense of safety, light levels must be sufficient for clear identification of vehicles and people.

CONCEPTOS BÁSICOS DE LUMINOTECNIA

FUNDAMENTAL CONCEPTS OF LIGHTING DESIGN

QUÉ ES LA LUZ?

El espectro visible

La luz se puede considerar como una radiación electromagnética, llamada energía radiante. Esta energía es capaz de activar la retina del ojo humano y producir una sensación visual.

El concepto de luz tradicional está basado en concepción antropológica, a través de la cual el hombre se conecta visualmente con el mundo que lo rodea.

El espectro visible, que comprende las emisiones radiantes de longitud de onda desde 380 nm hasta 780 nm, es la porción del espectro electromagnético percibida por el ojo humano.

La luz blanca percibida es una mezcla de todas las longitudes de onda visibles. El espectro visible se puede descomponer en sus diferentes longitudes de onda mediante un prisma de cuarzo que refracta las distintas longitudes de onda selectivamente.

WHAT IS LIGHT?

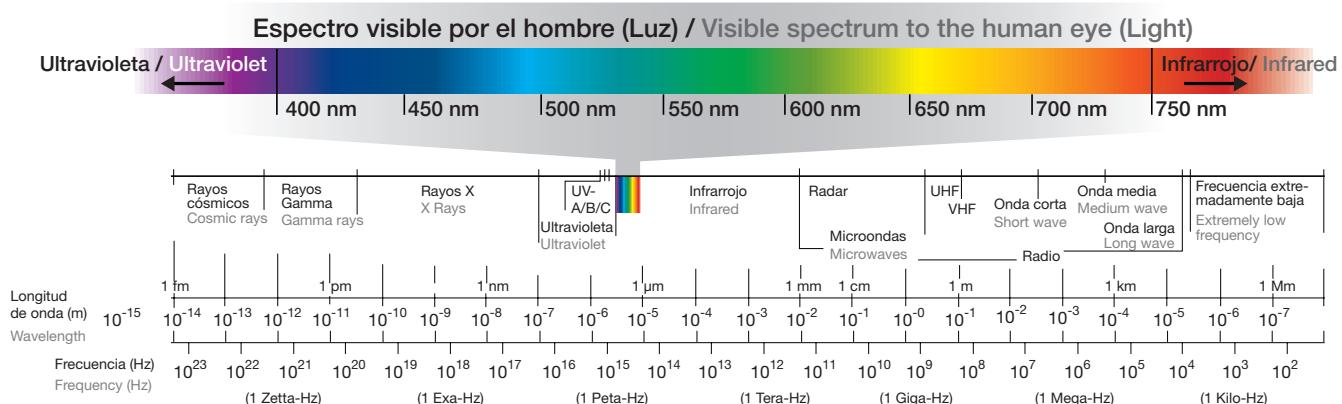

The visible spectrum

Light can be considered an electromagnetic radiation, called "radian energy". This energy is capable of activating the human eye's retina and produce a visual sensation.

The traditional concept of light is based on an anthropological conception, according to which the human being connects visually with the world around them.

The visible spectrum, which comprises the radiant emissions with a wavelength between 380 and 780 nm, is the portion of the electromagnetic spectrum which is visible to the human eye.

The white light perceived by the eye is a mixture of all the visible wavelengths. The visible spectrum can be broken down into its different wavelengths using a quartz prism which reflects each of them separately.

LUZ Y COLOR

La luz blanca está formada por una mezcla de colores. La luz solar y la luz incandescente contienen todos los colores del espectro: rojo, naranja, amarillo, verde, azul y violeta.

LIGHT AND COLOUR

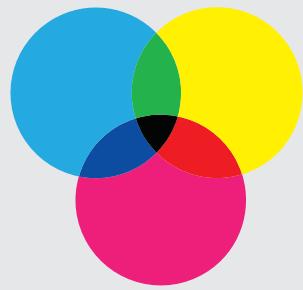

White light consists of a mixture of colours. Sunlight and incandescent light contain all the colours of the spectrum: red, orange, yellow, green, blue and violet.

Mezcla sustractiva

La mezcla sustractiva hace alusión a pigmentos o tintes, los cuales no emiten luz sino que funcionan absorbiendo (o sustrayendo) determinadas longitudes de onda. Al mezclar pinturas vamos sustrayendo partes del espectro, es por ello que el resultado será siempre un color más oscuro que los combinados inicialmente.

Subtractive mixture

A subtractive mixing refers to pigments or dyes, which do not emit light but work by absorbing (or subtracting) certain wavelengths. When mixing paints we subtract parts of the spectrum, which is why the result is always a darker colour than those initially combined.

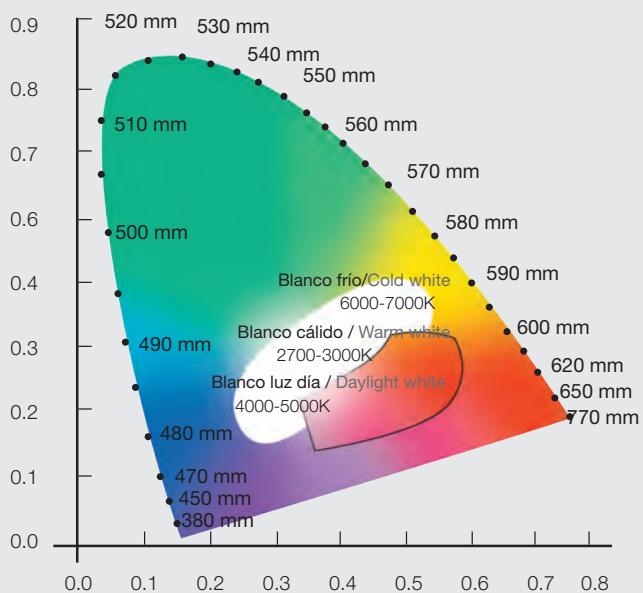

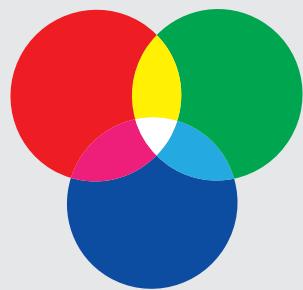

Mezcla aditiva

La mezcla aditiva hace alusión a color como forma de radiación de luz. Contrariamente a lo que ocurre con los pigmentos, el color resultante de combinar luces de colores es la suma de sus radiaciones, por lo que la mezcla siempre es más luminosa que los originales por separado.

Additive mixture

Additive mixing refers to colour as a form of light radiation. In contrast to what occurs with pigments, the colour is the result of a combination of light from colours and it is the sum of their radiations, so that the mixture is always brighter than the separate originals.

Triángulo de color CIE

Fue establecido en 1931, por la Comisión Internationale de l'Éclairage (CIE). Con él se definieron con precisión los tres colores primarios de la síntesis aditiva de color, a partir de los cuales pueden crearse todos los demás. La carta representa todas las cromaticidades visibles para una persona promedio, con los colores espectrales (más saturados) en el borde exterior y los más claros hacia el centro. En el punto donde se juntan todos los colores encontramos el blanco..

CIE colour triangle

The colour triangle was established in 1931, by the Commission Internationale de l'Éclairage (CIE). It precisely defines the three primary colours of additive colour from which all others can be created. The chart represents all the chromaticities visible to an average person, with the spectral colours (more saturated) at the outer edge and the lighter colours towards the centre. White is located where all the colours join together.

ÍNDICE DE REPRODUCCIÓN CROMÁTICA (IRC o Ra)

La capacidad de una fuente de luz para reproducir los colores se mide con el índice de reproducción cromática IRC o Ra.

El concepto de la reproducción cromática se define por el aspecto de los colores de los objetos iluminados en comparación con el aspecto que ofrecen bajo una luz de referencia (en principio, la luz natural o luz de espectro continuo).

El valor Ra se determina iluminando un conjunto de ocho colores de muestra establecidos por la norma DIN 6169 con la luz de referencia y la luz que se analiza. La reproducción cromática de cada muestra se valora de 0 a 100.

Para obtener el índice Ra, se debe calcular la media de los índices de los ocho colores. Para Ra=100, los colores obtenidos con la fuente de luz son idénticos a los producidos por la fuente de referencia.

DIN 5053	Ra
1A	90-100
1B	80-90
2A	70-80
2B	60-70
3	40-60
4	20-40

TEMPERATURA DE COLOR

La temperatura de color depende de la distribución de la luz emitida en la parte visible del espectro. Desde un punto de vista científico, representa la temperatura a la que un "cuerpo negro" debe calentarse para que emita una luz del mismo color que la de la fuente de luz estudiada. La temperatura se mide en grados Kelvin (K).

Cuando en una fuente de luz predomina el rojo se trata de una luz "cálida". Al contrario, si predomina el color azul se trata de una luz "fría". En la práctica, para conseguir un ambiente "agradable" a la vista con fuentes frías necesitaremos mayores niveles de iluminación que si hubiésemos utilizado las fuentes cálidas.

Las lámparas utilizadas normalmente se dividen en tres grupos de temperaturas de color:

- Blanco cálido (ww). Temperatura de color inferior a 3.300 K
- Blanco neutro (nw). Entre 3.300 y 5.000 K.
- Luz día (tw). Superior a 5.000 K.

Como ejemplos extremos, una bombilla incandescente tiene una temperatura de color de 2.700 K frente a 6.000 K de un tubo fluorescente luz día. Debe recordarse que dos fuentes de luz con la misma temperatura de color pueden tener diferentes propiedades de reproducción del color a causa de su diferente distribución espectral.

COLOUR RENDERING INDEX (CRI or Ra)

The colour rendering index (CRI or Ra) measures the ability of a light source to reproduce colours.

The concept of colour rendering is defined by the appearance of the colours of the objects lit by this light source in comparison with their appearance under a reference illuminant (in principle, natural light or light with continuous spectrum).

In order to determine Ra, eight sample colours established by the standard DIN 6169 are lit both by a reference illuminant and the light being analysed. The colour rendering of each sample is scored from 0 to 100.

In order to obtain the Ra index, one must calculate the average of the indexes of the eight colours. In the case of Ra=100, the colours obtained with the light source being analysed are identical to those produced by the reference illuminant.

DIN 5053	Ra
1A	90-100
1B	80-90
2A	70-80
2B	60-70
3	40-60
4	20-40

COLOUR TEMPERATURE

Colour temperature depends on the distribution of the light emitted in the visible part of the spectrum. Scientifically, it represents the temperature a "black body" must be at in order to emit light of the same colour as that of the light source which is being studied. This temperature is measured in kelvin (K). When in the light of a particular light source the predominant colour is red, this light is considered "warm". In contrast, if blue predominates, it is a "cold" light. In practice, in order to obtain with cold light sources an environment which is "pleasant" to the eye, we will need higher levels of lighting than if we chose warm sources.

The lamps most commonly used are divided in three groups of colour temperatures:

- Warm white (ww). Colour temperature under 3,300 K
- Neutral white (nw). Between 3,300 and 5,000 K.
- Daylight white (tw). Over 5,000 K.

As extreme examples, an incandescent bulb has a colour temperature of 2,700 K, while that of a daylight fluorescent tube's is 6,000 K. Note that two light sources with the same colour temperature can have different colour rendering properties due to their different spectral distribution.

FLUJO LUMINOSO

Es la cantidad de luz emitida por una fuente en todas las direcciones o energía radiante de una fuente de luz que produce una sensación luminosa.

Símbolo: Φ (Phi)
Unidad de medida: lm (lumen)

LUMINOUS FLUX

The luminous flux is the amount of light emitted by a source in all directions or the radiant energy of a light source which produces a luminous sensation.

Symbol: Φ (Phi)
Unit of measurement: lm (lumen)

Ejemplos:

Power led 1W	100Lm
Lámpara incandescente clara de 40W	430Lm
Tubo fluorescente T5 de 39W	3100Lm
Lámpara de halogenuros metálicos de 100W	9500Lm
Lámpara de vapor de sodio alta presión de 150W	17500Lm

Power led 1W	100Lm
40 W clear incandescent lamp	430Lm
39 W T5 fluorescent tube	3100Lm
100W metal halide lamp	9500Lm
150W high-pressure sodium vapour lamp	17500Lm

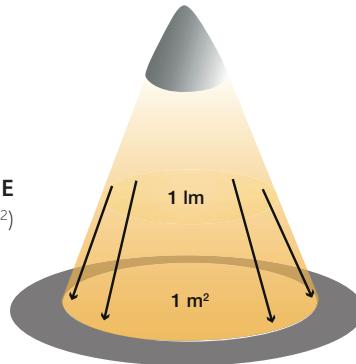

Una forma de comprender el término flujo luminoso sería con un símil hidráulico; podríamos equiparar el flujo luminoso a la cantidad de agua que sale por una esfera en todas direcciones.

The term "luminous flux" can be better understood through an analogy with hydraulics: the luminous flux can be compared to the amount of water coming out of a sphere in all directions.

ILUMINANCIA

Es el flujo luminoso recibido por una superficie.

Símbolo: E
Unidad de medida: lux (lumen/m²)

Ejemplos:

Luna llena	0.2 Lux
Día soleado	120000 Lux
Oficina estándar	500 Lux
Áreas de circulación	100Lux
Dormitorios	80 / 100 Lux

ILLUMINANCE

Illuminance is the luminous flux received by a surface.

Symbol: E
Unit of measurement: lux (lumen/m²)

Examples:

Full moon	0.2 Lux
Sunny day	120000 Lux
Average office	500 Lux
Traffic areas	100Lux
Rooms	80 / 100 Lux

Continuando con el símil hidráulico, la iluminancia sería la cantidad de agua por unidad de superficie.

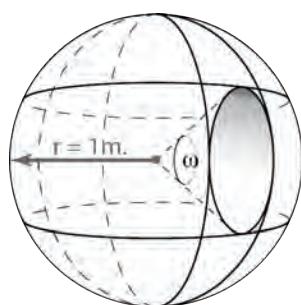

Continuing with the hydraulics analogy, illuminance would be the amount of water by unit of area.

INTENSIDAD LUMINOSA

Es el flujo luminoso emitido por una unidad de ángulo sólido en una dirección concreta.

Símbolo: **I**

Unidad de medida: **Cd**
(candela)

$$\omega_{\text{total}} = 4 \pi \text{ estereoradianes}$$

$$\omega_{\text{total}} = 4 \pi \text{ steradian}$$

Ejemplos:

Lámpara QR-111 60W 8°	48000Cd
Lámpara QR-70 50W 8°	12500Cd
Lámpara QR-CB51 50W 10°	15000Cd
Lámpara PAR-38 spot 120W	9500Cd
Lámpara CDM-R111 70W 10°	50000Cd

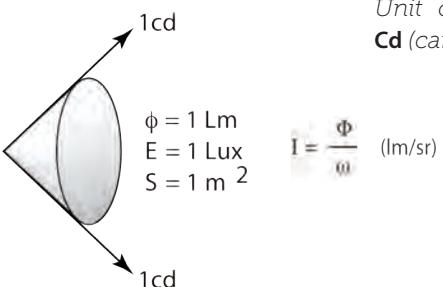

Asimilándolo hidráulicamente, sería la intensidad de agua lanzada en una dirección.

LIGHT INTENSITY

Light intensity is the luminous flux emitted by a unit of solid angle in a particular direction.

Symbol: **I**

Unit of measurement:
Cd (candela)

$$I = \frac{\Phi}{\omega} \quad (\text{lm/sr})$$

Examples:

QR-111 60W 8° lamp	48000Cd
QR-70 50W 8° lamp	12500Cd
QR-CB51 50W 10° lamp	15000Cd
PAR-38 spot 120W lamp	9500Cd
CDM-R111 70W 10° lamp	50000Cd

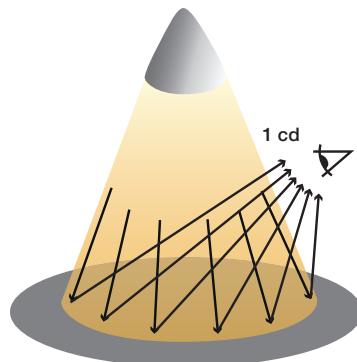

Using again the hydraulics analogy, light intensity would be the intensity of water cast in a particular direction.

LUMINANCIA

La luminancia es la cantidad de flujo luminoso reflejado por una superficie u objeto que percibe el ojo humano. Así pues, podemos afirmar que la luz que vemos es la luminancia.

Símbolo: **L**

Unidad de medida: **Cd/m²**

Ejemplos:

Papel blanco iluminado con 400lux	100 Cd/m²
Papel negro iluminado con 400lux	15 Cd/m²
Vía bien iluminada	2 Cd/m²

Para seguir con el símil hidráulico la luminancia es como el agua que rebota en cualquier superficie, que dependerá del grado de absorción que tenga el material.

LUMINANCE

Luminance is the amount of luminous flux reflected by a surface or object and which is perceived by the human eye. So, we can state that the light we see is luminance.

Symbol: **L**

Unit of measurement: **Cd/m²**

$$L = \frac{I}{S_{\text{aparente/apparent}}} = \frac{I}{S \cdot \cos \alpha}$$

Examples:

White paper lit by 400lux	100 Cd/m²
Black paper lit by 400lux	15 Cd/m²
Well-lit walkway	2 Cd/m²

Using the hydraulics analogy once again, luminance is like water on a surface: the amount of water bouncing off a particular surface will depend on the degree of absorption of this surface's material.

RENDIMIENTO O EFICACIA LUMINOSA

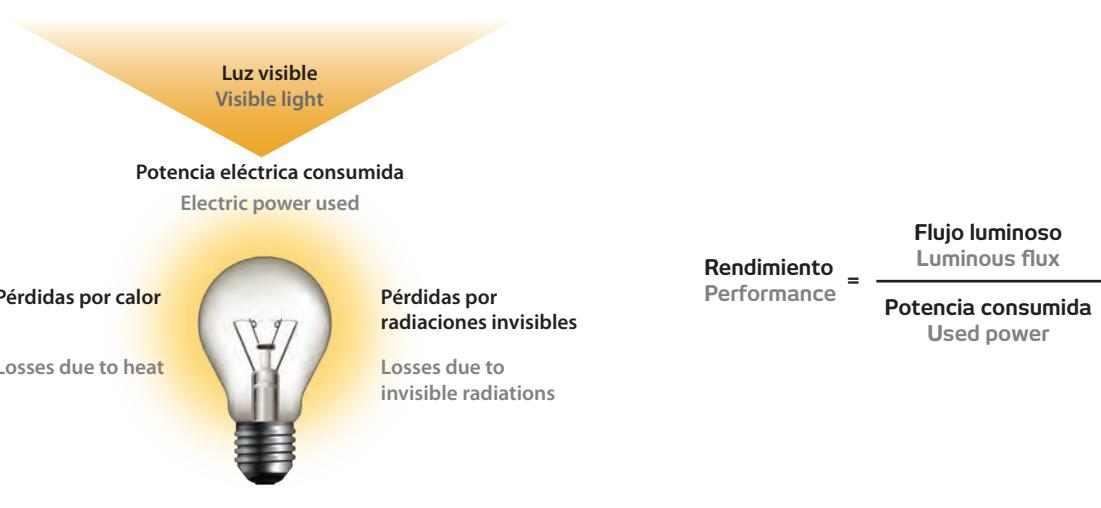

Es la relación existente entre el flujo luminoso y la potencia absorbida.

No toda la energía eléctrica consumida por una fuente de luz se transforma en luz visible. Parte se pierde por calor, radiación no visible (infrarrojos o ultravioleta), etc.

LUMINOUS PERFORMANCE OR EFFICACY

Luminous performance or efficacy is the relation between the luminous flux and the absorbed power.

Not all the electric power used by a light source is transformed into visible light. Part of this is lost due to heat, non-visible radiation (infrared or ultraviolet), etc.

Símbolo: η
Unidad de medida: lm/w

Symbol: η
Unit of measurement: lm/w

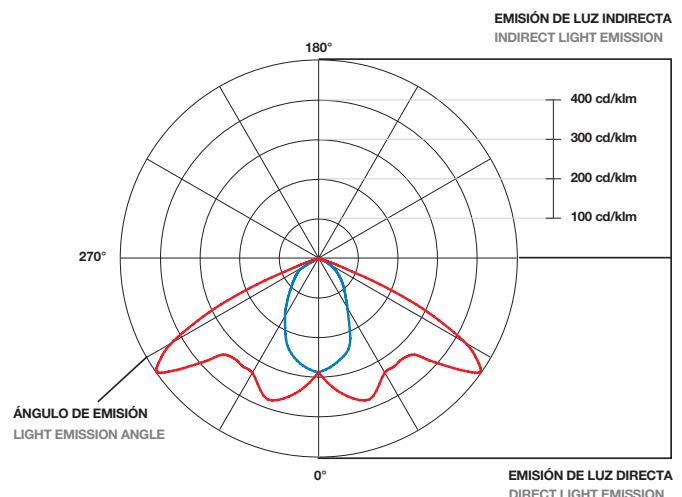

Ejemplos:

Lámpara incandescente	10-15 lm/w
Lámpara halógena	15-25 lm/w
Lámpara fluorescencia compacta	50-85 lm/w
Lámpara fluorescencia lineal	55-90 lm/w
Lámpara halogenuros metálicos	50-90 lm/w
Led Cree	74-139 lm/w
Lámpara vapor de sodio	80-140 lm/w

Examples:

Incandescent lamp	10-15 lm/w
Halogen lamp	15-25 lm/w
Compact fluorescent lamp	50-85 lm/w
Linear fluorescent lamp	55-90 lm/w
Metal halide Lamp	50-90 lm/w
Led Cree	74-139 lm/w
Sodium vapor lamp	80-140 lm/w

DIAGRAMA INTENSIDAD LUMINOSA

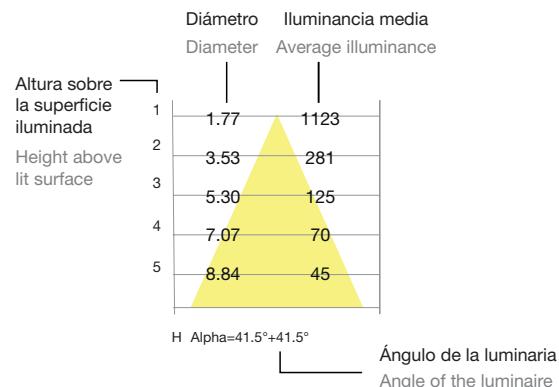

El diagrama de intensidad luminosa es el resultado de tomar medidas de intensidad luminosa en diversos ángulos alrededor de una luminaria y presentar los resultados en un gráfico, generalmente en coordenadas polares.

El gráfico muestra dos planos verticales: uno transversal y otro longitudinal (0° y 90°). Normalmente, el transversal se representa en color rojo y el longitudinal en azul.

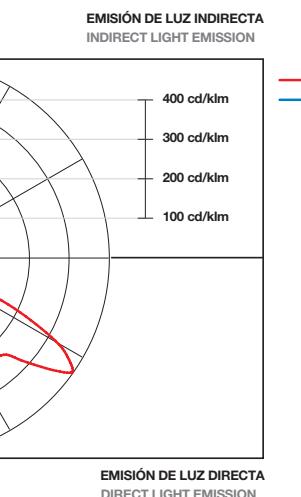

En los casos en los que la distribución luminosa de una luminaria tiene el mismo comportamiento en todos sus planos verticales, la curva polar se representa mediante un solo trazo, generalmente, en color rojo. Este es el caso de las luminarias con una distribución completamente simétrica en los planos verticales. Habitualmente, la información fotométrica de una luminaria lo determina el flujo luminoso de 1000 Lm por lo que los valores del gráfico se expresan en cd/Klm. De esta forma podremos comparar distintas fuentes de luz o luminarias para poder escoger la más adecuada a nuestras necesidades.

DIAGRAMA DEL HAZ DE LUZ

En el caso que el diagrama de intensidad luminosa sea simétrico obtenemos la información necesaria para generar el cono de luz. En este diagrama se indica el diámetro del círculo iluminado según el ángulo de proyección y el nivel de iluminación medio en relación a la distancia a la superficie iluminada. Esta superficie se supone perpendicular al eje del haz de luz.

LIGHT INTENSITY DIAGRAM

The light intensity diagram is the representation on a graph (generally by polar coordinates) of measurements of light intensity taken in different angles around a lamp. The graph shows two vertical planes: transverse and longitudinal (0° and 90°). Usually, the transverse plane is represented in red and the longitudinal, in blue.

When the light distribution of a luminaire presents the same behaviour in all its vertical planes, the polar curve is represented by a single line, generally red. This is the case for luminaires with a completely symmetrical light distribution in its vertical planes.

Usually, a luminaire's photometric information is determined by the 1000 Lm luminous flux; for this reason the graph's values are expressed in cd/Klm. This way, we will be able to compare different light sources or luminaires in order to be able to choose the one which is most suitable to our needs.

DIAGRAM OF A LIGHT BEAM

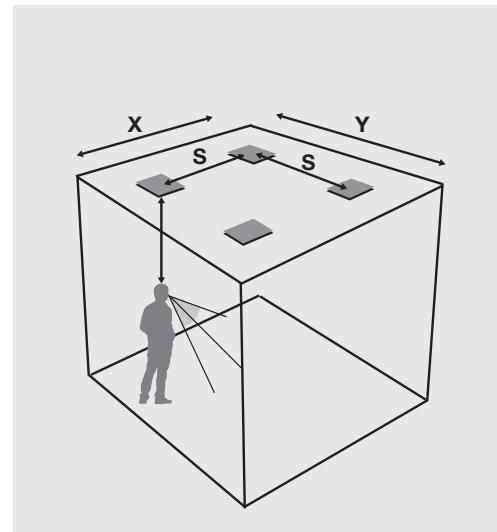

If the light intensity diagram is symmetrical, it provides the necessary information to generate the light cone. This diagram shows the diameter of the lit circle determined by the projection angle and the average level of lighting in relation to the distance to the lit surface. This surface is supposed to be perpendicular to the axis of the light beam.

VALORES UGR

El método UGR (Unified Glare Rating – índice de deslumbramiento unificado) ha sido introducido por la CIE (Comisión Internacional de Iluminación) mediante la publicación CIE 117 – 1995 “Deslumbramiento molesto en la Iluminación de Interiores” para tener un método unificado para la evaluación del deslumbramiento. A diferencia del método anterior (Diagrama de luminancia o de Söllner), el índice de deslumbramiento depende tanto de las características de la luminaria como de las características del ambiente donde está instalado teniendo en cuenta la posición relativa observador – luminaria. El índice de deslumbramiento UGR se calcula a partir de las dimensiones de la habitación, del tipo de luminaria, de sus dimensiones y de las propiedades de reflexión de las superficies del ambiente.

Está expresado por la fórmula:

$$UGR = 8 \log \left(\frac{0,25}{L_b} \sum \frac{L^2 \omega}{Q^2} \right)$$

- **UGR:** valor que define la clase de deslumbramiento molesto (es decir, el deslumbramiento que provoca molestias sin perjudicar la visión de los objetos), producido directamente por los aparatos de una instalación de iluminación en interiores;

- Luminancia de fondo L_b : luminancia del campo visual, en cd/m^2 , con la exclusión de las fuentes deslumbrantes;
- Luminancia de la fuente L : luminancia de las partes luminosas, en cd/m^2 de cada aparato en la dirección de observación;
- Ángulo sólido ω : ángulo sólido, en estereoradiantes, de las partes luminosas de cada luminaria en la dirección del ojo del observador y
- Índice de posición de Guth Q : valor que define su desplazamiento angular respecto a la línea de visión, para cada luminaria.

UGR VALUES

The UGR method (Unified Glare Rating) has been introduced by the CIE (International Commission on Illumination) with the publication of CIE 117 – 1995 “Discomfort glare in interior Lighting” to have a unique method to evaluate the glare. In comparison to the previous method (Luminance diagram or Söllner diagram), the glare rating depends on both the luminaire characteristics and the environment, where the luminaire is installed, taking into consideration the relative position of the observer with regards to the luminaire. The UGR glare rating is calculated using the room dimensions, taking into consideration the type of luminaire, its dimensions and the reflectance properties of the environment surfaces. Its formula is as follows:

- **UGR:** value defining the types of discomfort glare (that is to say, the discomfort glare causing inconveniences without damaging objects vision), caused directly by an interior luminaire installation;
- **Background luminance L_b :** Visual field luminance, in cd/m^2 , without the glaring light sources;
- **Source luminance L :** Luminous parts luminance, in cd/m^2 , of every luminaire in the observation direction;
- **Solid Angle ω :** solid angle, in estereoradians, of the luminous parts of every luminaire in the observation direction and
- **Guth position index Q :** value defining its angular movement with regards to the vision line, for each luminaire.

- Las dimensiones del ambiente como también de la distancia entre ejes de las luminarias en ambas direcciones están especificadas en relación a la distancia H entre el plano del aparato y el plano del observador (que se asume generalmente igual a 1.2 m):
 - S Distancia entre ejes luminarias en ambas direcciones igual a 0.25H

- X Dimensión longitudinal del local igual a $4H$

- Y Dimensión transversal del local igual a $8H$

- Índices de reflexión del techo, paredes y suelo igual a 0.7, 0.5, 0.2, respectivamente.

Para comprender mejor el significado, los valores UGR indicados en el diagrama polar de la luminaria han sido agrupados en las siguientes clases de exemplificación por tipología de aplicación, del modo como ha sido especificado en la norma UNE 12464.1:

- <16 máximo confort visual
- <19 confort requerido en las oficinas
- <22 confort requerido en otros puestos de trabajo
- <25 exigencia de reducido confort visual
- <28 bajísimo confort visual

- The environment dimensions, as well as the distance between axis in both directions are specified by in relation to the distance H between the luminaire level and the observer level (normally considered equal to 1.2 m):

- S Distance between the luminaire axis in both directions equal to a 0.25H

- X Linear dimension of the place equals $4H$

- Y Perpendicular dimension of the place equals $8H$

- Ceiling reflectance index, walls and floor a 0.7, 0.5, 0.2, respectively.

In order to understand this better, the UGR indicated values in the polar diagram of the luminaire have been classified in the following categories sorted by application, as indicated by regulation UNE 12464.1:

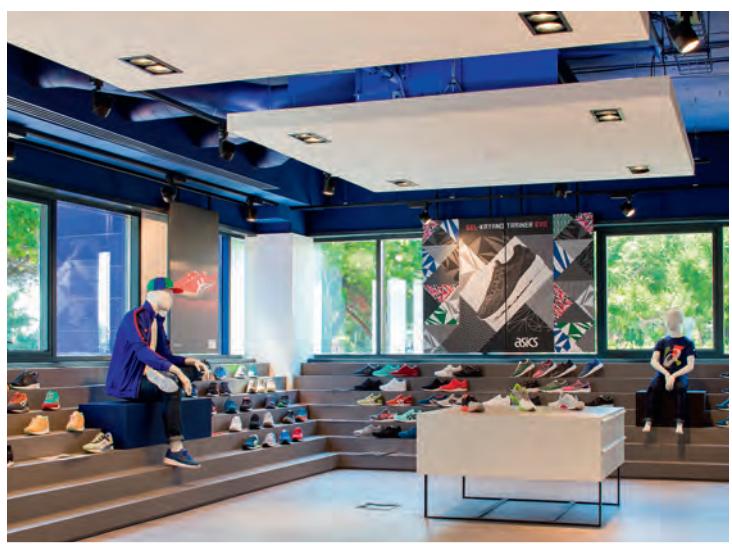

- <16 Maximum visual comfort
- <19 Office required comfort
- <22 Other working environments required comfort
- <25 Reduced comfort visual demand
- <28 Very low comfort visual

• ELECTRICAL UNITS •

Tabla para la selección de driver.

Número máximo de piezas que pueden trabajar con cada equipo.

Entre paréntesis (x) valor para 100-127V. Todas las piezas se conectan en serie. Para un buen funcionamiento de la instalación, un técnico cualificado debe realizar el dimensionado de la instalación en referencia a la sección del cableado y distancias entre equipos y piezas.

Algunos drivers son multi-intensidad, por lo que debe seleccionarse la corriente adecuada según se indica en el etiquetaje de las piezas.

Driver selection table.

Maximum number of pieces that can work with each driver.

In brackets (x) value for 100-127V. All elements are connected in series. For the installation to work properly, a qualified technician must carry out the installation measurement with reference to the wiring section and the distances between equipment and pieces.

Some drivers are multicurrent, so that the right current must be chosen as shown in the labelling of the pieces.

CONTROLADORES DMX / DMX CONTROLLERS

- Para configuraciones a medida, consulte con nuestro equipo comercial
- For bespoke combinations please contact our sales department

- Controladores DMX512 que no requieren de sistema operativo para ejecutarse.
 - Ajuste en tiempo real de la intensidad y el color de una escena.
 - Programable mediante el software de control y el cable USB incluidos.
 - Fuente de alimentación incluida.
- DMX512 stand alone controller.
- Live setting of the intensity and colour of a scene.
- Programmable with the included USB cable and control software.
- Power supply included.

- Controlador DMX de instalación en pared, que no requiere de sistema operativo para ejecutarse.
 - Panel táctil con 25 páginas de 8 escenas.
 - Cable USB, CDROM para instalación y manual de usuario incluidos.
 - Fuente de alimentación y control remoto Infrared incluidos.
- Stand alone wall mounted DMX controller.
- Touch-sensitive panel with 25 pages of 8 scenes.
- Delivered with a USB cable and installation CDROM including user manual.
- Power supply and Infra red remote control included.

- Interfaz Mini USB-DMX interface.
 - Memoria de 64K con reloj/calendario.
 - Cable USB, CDROM para instalación y manual de usuario incluidos.
 - Fuente de alimentación incluida.
- Mini USB-DMX interface.
- 64K memory with clock/calendar.
- Delivered with a USB cable and installation CDROM including user manual.
- Power supply included.

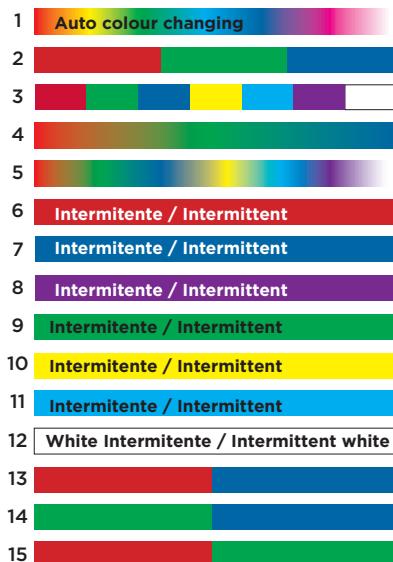

TELECOMMUNICATIONS CULTURAL CENTER, SANTO DOMINGO. REP. DOMINICANA.

CONTROLADORES RGB CON MANDO A DISTANCIA

RGB CONTROLLERS WITH REMOTE CONTROL

- Controlador de tiras led con 15 programas RGB predefinidos, anillo de control independiente de 64 colores, cambio de velocidad en programas con secuencia de colores y cambio de intensidad lumínica en programas monocolor. Incorpora un mando a distancia por radiofrecuencia.
- LED stripe controller with 15 pre-set RGB programmes, 64-colour independent control ring, change of speed for programmes with colour sequence and change of light intensity for monochrome programmes. It incorporates a radio-frequency remote control.

MULTIDIR EVO
71-2971-00-37

Descripción
Kit electrónico con módulo LED (estándar Zhaga) incluido. Para su instalación es necesario completar la luminaria con una de las diferentes carcasa disponibles.

CARACTERÍSTICAS TÉCNICAS

Tipo:	ACCESORIO
Orientable:	Orienteble ±40° alrededor de los dos ejes que forman el plano horizontal.
Indice protección IP:	IP23
Fuente de luz 1:	1 x LED Cree 40.2W Blanco cálido - 3000K 3765.4 lm ^{lm} CRI 80
Ángulo Ópticas / Reflector:	12°
Voltaje / Frecuencia:	1050mA
Garantía (Años):	2
Posibilidad de extensión de garantía:	Sí, 5 Años
Unidades por caja:	100
EAN:	8435381415662

SIMBOLOGÍA / SYMBOLS

	Clase I	Class I
	Clase II	Class II
	Clase III	Class III
	Sistema de codificación para indicar el grado de protección proporcionado por un envolvente contra la entrada de elementos sólidos y líquidos	A coding system that shows the degree of protection that a casing provides against the penetration of solid objects or dust and liquids
	Sistema de codificación para indicar el grado de protección proporcionado por un envolvente contra los impactos mecánicos nocivos. Energía de impacto (Jules)	It is a coding system that shows the level of protection that a casing provides against damaging mechanical impacts. Energy of impact (Jules)
	Luminarias no adecuadas para cubrirse con material aislante térmico	Luminaires should never be covered with any heat insulating material
	Luminarias no adecuadas para el montaje directo en superficies normalmente inflamables	Non suitable for direct installation on normally inflammable surfaces
	Resistente al hilo incandescente a 850°C	Resistance to incandescent wire at 850°C
	Distancia mínima entre el foco de la luminaire y el objeto iluminado	Minimum distance to be left between the focus of the lighting fixture and the lightened object
	Uso independiente	Independent use
	Diámetro de empotramiento	Hole diameter for recessing
	Corte de empotramiento	Hole dimensions for recessing
	Los anclajes permiten su instalación en techos de X mm a X mm	The fixing can be used on X mm - X mm ceilings
	Equipo no incluido	Gear not included
	Equipo electrónico	Electronic gear
	Equipo magnético	Magnetic gear
	Unidades de embalaje	Items per box
	Ver página xxx	See page xxx
	Modelos registrados	Registered models
	Fluxo nominal bajo condiciones reales de trabajo ($T_j=85^\circ$)	Design flow under real working conditions ($T_j=85^\circ$)
	Regulador de intensidad	Dimmer
	Consultar disponibilidad	Check availability
	Eficiencia	Efficiency
	Tensión de entrada	Supply voltage
	Intensidad de corriente máxima	Maximum current intensity
	Amperios	Amperes
	Corriente continua	Direct current
	Corriente alterna	Altern current
	Exterior	Outdoor
	Interior	Indoor
	Vida útil	Lamp life
	Interruptor de encendido	On•off switch
	Doble interruptor de encendido	Double on•off switch
	Interruptor de encendido en el cable	Cable on•off switch
	Interruptor de cuerda	Pull cord switch
	Regulador de intensidad	Dimmer
	Conexión USB	USB port
	Apto para posición vertical y horizontal	Suitable for vertical and horizontal mounting
	Orientable	Adjustable
	No orientable	Non adjustable
	Espejo de aumento x3	Magnifying mirror x3
	Espejo de aumento x5	Magnifying mirror x5
	Dirección del halo de luz	Halo light direction
	Mando a distancia	Remote control
	Mando a distancia no incluido	Remote control not included
	Controlador con mando a distancia	Controller with remote control
	Mando de pared	Wall Remote Control
	Mando de pared no incluido	Wall Remote Control not included
	Toma de corriente	Socket
	Velocidades	Speeds
	Motor de corriente continua	Direct current motor.
	Estaca de plástico incluida	Plastic spike included
	Mantenimiento sin herramientas	Maintenance without tools
	Producto sin barniz. Se puede usar un estropajo abrasivo para el mantenimiento	Non varnished product. An abrasive scourer can be used for maintenance
	Producto barnizado. Usar sólo paños suaves no abrasivos para el mantenimiento	Varnished product. Use non abrasive soft clothes only for maintenance
	Cristal de recambio de cortesía	Courtesy spare glass included
	Temperatura en la superficie menor de 40°C	Temperature on the surface under 40°C
	Temperatura en la superficie entre 40 y 80°C	Temperature on the surface between 40 and 80°C
	Temperatura en la superficie superior a 80°C	Temperature on the surface over 80°C
	Filtro Difusor	Difuser Filter
	Filtro 3000K	3000K Filter
	Fotometría asimétrica	Asymmetrical photometry
	Fotometría simétrica	Symmetrical photometry
	Cumplimiento con las normativas vigentes anticontaminación lumínica	According to regulations in force about luminous pollution
	Luminaria	Luminaire
	Bloque óptico	Optical Assembly
	Permite instalación LATERAL de ØXmm	LATERAL installation for ØXmm
	Permite instalación TOP de ØXmm	TOP installation for ØXmm
	Luminaria certificada por el Instituto de Astrofísica de Canarias	Luminaire certified by the Institute of Astrophysics of Canary Islands
	Flujo Hemisferio Superior (FHS)	Upper hemispherical luminous flux (light pollution percentage)
	Eficiencia energética	Energy Efficiency
	Horas de vida	Life (in hours)
	Luminaria adecuada para instalar en ambientes con atmósfera marina.	Luminaire suitable for installation in environments with marine atmosphere.
	Lámpara recomendada	Recommended bulb
	Driver recomendado	Recommended driver
	Compatible con IN	Compatible with IN
	Revoluciones por minuto	Revolutions per minute
	Silencioso	Quiet
	Función inversa	Reverse function
	Palas reversibles	Reversible blades
	Barras	Downrods

	Fotometría	Photometric Data		Permite regular la sensibilidad del sensor	Allows you to regulate the sensor sensitivity
	Equivalente a	Brighter as		Ángulo de las ópticas	Lens angle
	Metros cuadrados iluminados con una unidad del producto	Square meters illuminated by each product unit		Canales	Channels
	Aislamiento de seguridad, a prueba de cortocircuito	Security isolation, short circuit proof		xx cambios de color	xx changing colors
	Ángulo de detección	Detection angle		Nº de metros máx. de conexión en serie	Max. no. of metres in serial connection
	Distancia de detección	Detection distance		x metros de cable	x meters of cable
	Incluye sensor de movimiento y crepuscular	It includes movement and twilight sensor		Reflector direccional	Directional reflector
	Permite regular el tiempo de encendido	Allows you to regulate the time for the "on" switch		Disipación activa	Active dissipation
	Panal de abeja	Honeycomb		Drenaje	Drainage

MATERIALES / MATERIALS

	PLÁSTICO ABS	ABS PLASTIC		CRISTAL AHUMADO	SMOKED GLASS		YESO	PLASTER
	ACRÍLICO	ACRYLIC		CRISTAL TRANSPARENTE	TRANSPARENT GLASS		POLIPROPILENO	POLYPROPYLENE
	ALUMINIO	ALUMINIUM		POLIETILENO DE ALTA DENSIDAD	HIGH DENSITY POLYTHYLENE		POLIURETANO	POLYURETHANE
	ALUMINIO ANODIZADO	ANODIZED ALUMINIUM		ACERO INOXIDABLE AISI 202	STAINLESS STEEL AISI 202		PVC	PVC
	ALUMINIO EXTRUSIONADO	EXTRUDED ALUMINIUM		ACERO INOXIDABLE AISI 304	STAINLESS STEEL AISI 304		RESINA	RESIN
	ALUMINIO INYECTADO	INJECTED ALUMINIUM		ACERO INOXIDABLE AISI 316	STAINLESS STEEL AISI 316		SILICONA	SILICONE
	ALUMINIO DE ALTA PUREZA	HIGH PURITY ALUMINUM		ESPEJO	MIRROR		SEDA	SILK
	DM (TABLERO DE FIBRA DE DENSIDAD MEDIA)	MDF (MEDIUM DENSITY FIBREBOARD)		POLICARBONATO	POLYCARBONATE		ACERO	STEEL
	LATÓN PULIDO	POLISH BRASS		POLICARBONATO MATE	MATT POLYCARBONATE		ACERO ACABADO EPOXY	EPOXY FINISH STEEL
	ALGODÓN	COTTON		POLICARBONATO OPAL	OPAL POLYCARBONATE		TECNOPOLÍMERO	TECHNOPOLYMER
	MATIZADO	MATTE		POLICARBONATO PRISMATIZADO	PRISMATIC POLYCARBONATE		TERMOPLÁSTICO	THERMOPLASTIC
	CRISTAL	GLASS		POLICARBONATO TRANSPARENTE	TRANSPARENT POLYCARBONATE		PROTECCIÓN UVA	UVA PROTECTION
	CRISTAL BISELADO Y SATINADO	BEVELED AND SATIN GLASS		POLIETILENO	POLYTHYLENE		CRISTAL UVA	UVA GLASS
	CRISTAL BISELADO	BEVELED GLASS		PMMA	PMMA		MADERA	WOOD
	CRISTAL BURBUJA	BUBBED GLASS		PMMA MATE	MATT PMMA		ZAMAK	ZAMAK
	CRISTAL TEMPLADO	HARDENED GLASS		PMMA TRANSPARENTE	TRANSPARENT PMMA		MATERIAL DIFUSOR	DIFFUSER MATERIAL
	CRISTAL MATE	MATT GLASS		PMMA OPAL MATE	SATIN OPAL PMMA		MATERIAL PANTALLA	SHADE MATERIAL
	CRISTAL OPAL	OPAL GLASS		PMMA PRISMATIZADO	PRISMATIC PMMA		MATERIAL PALAS	BLADES MATERIAL
	CRISTAL RÚSTICO	RUSTIC GLASS		ALGODÓN PLASTIFICADO	PLASTICIZED COTTON			
	CRISTAL SATINADO	SATIN GLASS		CONTRACHAPADO	PLYWOOD			

ACABADOS / FINISHING

	05 60	NEGRO	BLACK
	06	COBRE	COPPER
	08	VERDE	GREEN
	10	NARANJA	ORANGE
	11	AZUL	BLUE
	13	MAGENTA	MAGENTA
	14 BL	BLANCO	WHITE
	15	ÁMBAR	AMBER
	16	BLANCO ANTIGUO	OLD WHITE
	18 Z6	MARRÓN ÓXIDO	RUSTY BROWN
	19	BRONCE	BRONZE
	20	BEIGE	BEIGE
	21 CR	CROMO	CHROME
	22	LATÓN PULIDO	POLISH BRASS
	23	DORADO	GOLDEN
	24	AMARILLO	YELLOW
	25	ROJO	RED
	34 GRIN3 AJI ATIAU	GRIS	GREY
	37	TRANSPARENTE	TRANSPARENT
	48	ACERO CINCADO	ZINC PLATED STEEL
	53	ANODIZADO GRANATE	GRANATE ADONISED
	54 BKIJ2	ALUMINIO ANODIZADO	ANODIZED ALUMINIUM
	93	MADERA CLARA	LIGHT WOOD
	94	ANODIZADO ORO	GOLD ANODIZING
	81 NS	NÍQUEL SATINADO	SATIN NICKEL
	AF	ALUMINO SATINADO	SATIN ALUMINIUM

	AL AW	ALUMINIO	ALUMINIUM
	AV	ACERO GALVANIZADO	GALVANISED STEEL
	AS	NEGRO BRILLANTE / BLANCO BRILLANTE / CROMO	SHINY BLACK / SHINY WHITE / CHROME
	BB	CABEZAL EN GRIS (AU) + COLUMNA EN NEGRO (BP)	HEAD IN GREY (AU) + COLUMN IN BLACK (BP)
	BP	NEGRO (PINTURA EN POLVO)	BLACK (POWDER PAINT)
	BS	GRIS RAL 9007	GREY RAL 9007
	BX S2	ALUMINIO CEPILLADO	BRUSHED ALUMINIUM
	BY	ARENA	BEIGE FABRIC
	CA	ACERO INOXIDABLE AISI 316	STAINLESS STEEL AISI 316
	CC	GRIS ENVEJECIDO	OLD GREY
	CF	BLANCO BRILLANTE	BRIGHT WHITE
	CI	MARRÓN	BROWN
	CS	GRIS CEMENTO	CEMENT GREY
	CY	BRONCE OXIDADO	DARK ANTIQUE BRONZE
	E2	ORO VIEJO	OLD GOLD
	E4	PATINÉ	ANTIQUE BRASS
	F5	ORO PINTADO	PAINTED GOLD
	J6	MARRÓN	BROWN
	J7	MARRÓN COBRIZO	COPPER BROWN
	K7	GRIS PIEDRA	STONE GREY
	T001	TRAMADO BEIGE	PERFORATED BEIGE
	T4	PLATA RÚSTICA	RUSTIC SILVER
	V7	COBRE VIEJO	OLD COPPER
	X8	ANODIZADO BRONCE	ANODIZED BRONZE
	Y2	MARRÓN ENVEJECIDO	OLD BROWN
	Y4	ACERO INOXIDABLE AISI 202/304	STAINLESS STEEL AISI 202/304
	Z5 BQ	GRIS URBANO	URBAN GREY
